Chapter Twenty Eight – 3

War for the Minds of Men

The two slavemaster groups seeking to rule the entire world are the British nobility and the Catholic Popes.

It is not my words they want to rule the world. **It is their words.**

They are hung by their own statements. ^{1, 2}

The British nobility and the Popes want a two-class society where Kings and Priests rule over all other men.

The rest of humanity does not agree to their idea that the slavemasters should rule the world.

Most men do not want to live under the boot and say-so of the British nobility or some Pope on a throne.

Most men want to live as free men who live under their own free will and say-so.

And thus came about the **War for the Hearts and Minds of Men.**

The slavemasters have been trying to force people to accept their idea they should rule the entire world.

Thus the slavemasters have conducted mind control research looking for a way they can control thinking.

A person creates thoughts and ideas. Mind is a word used to represent thinking activity.

Mind control means – control over the thoughts and ideas of others; control of thinking.

Mind control is a fantasy of slavemasters, intimately cherished as something desirable and possible.

What they hope to accomplish is impossible. They cannot ever control another person's thoughts

control another person's thoughts.

The only way you could control another person's thoughts is you would have to **be** that person.

And since you can never **be** the other person, then you can never control his thoughts.

Even though mind control is a myth, a fairy tale, we will show you their vicious attempts at it.

And we will show you how to defeat their attempts at mind control.

.

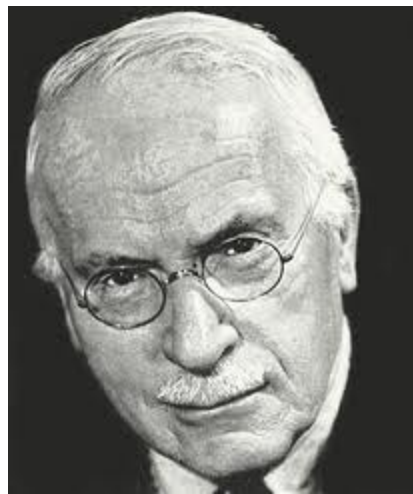

Development of Advanced Mind Control

On 1 June 1951 British, Americans and Canadians met at a secret conference at a Ritz-Carlton in Canada.

They agreed to a joint venture in how to brainwash people – mind control and behavior modification research.

Members of British intelligence and the CIA were in attendance. ³

Allen Dulles was a British intelligence operative who was Director of the CIA.

Allen Dulles

On 13 April 1953, Allen Dulles approved Project MK-Ultra. MK-Ultra had 149 sub-projects.

Starting in 1954, Ron Hubbard thereafter worked for a CIA unit called Political Action Staff. ⁴⁰

Miles Copeland was the CIA officer who headed that unit and he was Hubbard's handler.

Miles Copeland

In 1959 MK Ultra subproject 94 began – attempt to control human behavior by electrical signals to the brain.

Stanford Research Institute was one place where subproject 94 was carried out. ⁴

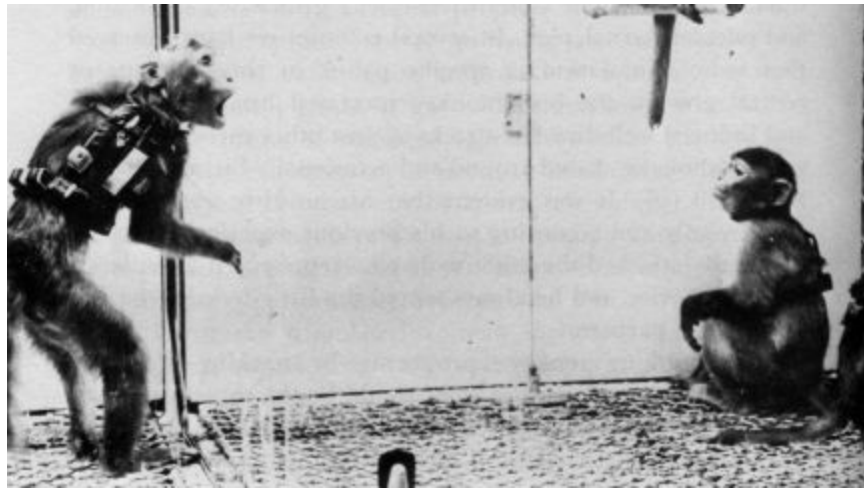

In 1959 MK Ultra subproject 106 was approved, also for researching electrical stimulation of the brain. ⁵

Dr. Jose Delgado conducted research into direct Electrical Stimulation of the Brain (ESB).

The monkeys had brain implants which acted as a transmitter and a receiver.

The monkeys had their moods and movements controlled by receiving commands to the brain from a computer.

Threatening attitude and aggressive behavior produced by brain stimulation

Delgado used brain implants on a bull. The implants were activated by remote control FM radio waves.

Delgado halts a charging bull

They successfully controlled animals but when they tested it on humans **it failed miserably.**

Every method of attempted mind control is dependent on your cooperation.

If you don't cooperate, every method of attempted mind control fails.

* * *

Several assassination plots against Cuban dictator Fidel Castro utilizing CIA-recruited operatives from the Mafia failed. The CIA then organized “revolutionary forces” to invade Cuba. When they obtained a foothold on Cuban soil, the US government would officially recognize them as the new government of Cuba and provide them with military support to oust Castro. But President Kennedy did not authorize the needed air support to the invading forces and they were defeated by Castro forces on April 17, 1961. It was called the Bay of Pigs Invasion.

President Kennedy intended to dismantle the CIA after the Bay of Pigs fiasco. Kennedy said he wanted to “splinter the CIA into a thousand pieces and scatter it into the winds.”

Kennedy also planned to withdraw our military from Vietnam. The CIA was using the war to traffic heroin into America.

Kennedy forced Allen Dulles to resign from Director of the CIA in September 1961.

President Kennedy brought in John McCone to be the new CIA director.

* * *

MK Ultra Subproject 142 began on 1 July 1962. ¹¹

It uses animals to deliver biological and chemical warfare agents. It is also implanting electrodes into animals for use in “direct executive action”.

They mean ASSASSINATION – by animals

Look! It's a bird! No, it's a plane!
No... it's a bird bomber!

*** * ***

CIA Inspector General John Earman began an investigation of MK Ultra.

Earman submitted his report on 26 July 1963. ^{10, 15}

The report stated that Gottlieb's Technical Services Division had initiated 144 projects relating to the control of human behavior during the previous ten years of operation of the MK Ultra program. Gottlieb had pruned this down to 25 that he wanted to keep.

McCone made Seymour Russell the new chief of Technical Services Staff. ⁸

Sidney Gottlieb was allowed to be number-two man under Russell, which was the result of some serious glad-handing by Gottlieb's friend Richard Helms.

Wow. Some 'disciplinary investigation', eh?

More like a phone tree get together.

In his new job, Gottlieb kept control of MK Ultra but he had to prune it. Some projects were continued. ⁹

The Society for the Investigation of Human Ecology was renamed Human Ecology Fund. ⁷

Electronic mind control went under the CIA Office of Research and Development. ORD officials kept searching for ways to control human behavior, and they were doing so with space-age technology that made the days of MK Ultra look like the horse-and-buggy era.
^{7, 10}

The next step in developing advanced mind control weapons was the use of waves.

The waves used are out of the range heard by the ears.
Yet the person can still hear the transmitted sounds or voices in his head.

Per an internet posting:

“ Energy normally travels in waves. Light and sound are both forms of energy, and thus, have wavelengths. If you take the keys on a piano as an example, you notice that the notes produced range from low to high. The following is the electromagnetic spectrum:

Cosmic Rays (highest)

Gamma Rays

X-Rays

Ultraviolet Light

Visible Light

Infrared

Radar

Microwaves

TV & FM Radio

Shortwave Radio

AM Radio

Aircraft & Shipping Bands

ELF waves (Extra Low Frequency)

The technology has been developed to send out messages as microwaves and extremely low frequency waves (ELFs) which can be heard without the ears. These waves can also be specialized to cause physical illness. Experiments on the effects of ELF waves are routinely carried out on unsuspecting populations around the world.

Some people find it hard to believe that messages can be broadcast and received without using the ears.

Radio and television are words and pictures broadcast in wave form to a receiver.

Your radio and television are receivers.

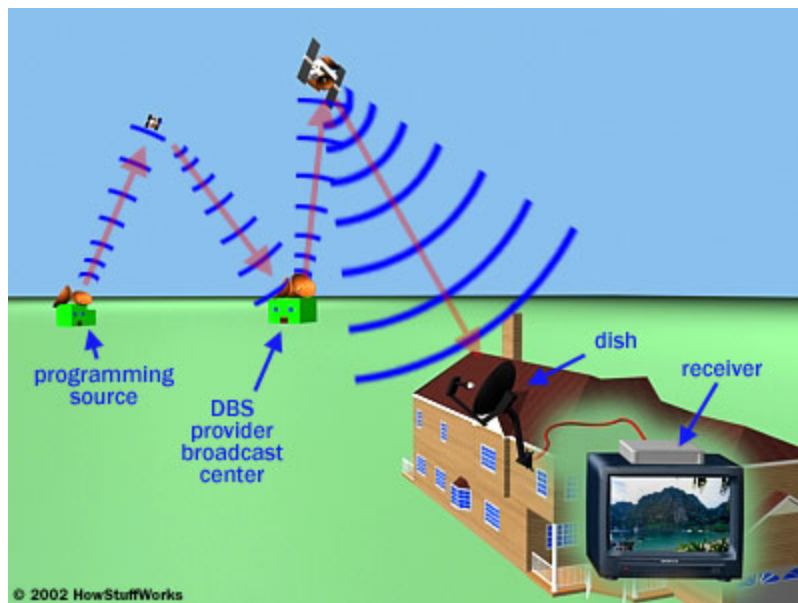

Same principle, the brain is also a receiver. The living spirit inhabiting a body is also a receiver.

Radio or TV Tower

Satellite Radio

Satellite Television

Experiments have shown that if some people are subjected to these waves for little more than a minute, they begin to act in life as the messages dictate. In their minds, **these messages appear to be their own thoughts**, when in reality they are receiving messages broadcast from outside them, versus thoughts the person himself originated.

Slavemasters are forever building in the idea of a “subconscious” as if YOU don’t hear it.

Well, wouldn’t be much point to it, would there, if that was the case? Because if you don’t “hear” it, you don’t carry it out, right?

Right! So much for the “subconscious” idea then.

They discovered they could transmit sounds to people, including voice sounds.

By 1962 research was underway to develop the means to send covert mind control messages through the air – using transmitted waves, such as microwaves and radio waves.

Pulsed microwave voice-to-skull (or other-sound-to-skull) transmission was discovered during World War II by radar technicians who found they could hear the buzz of the pulses being transmitted by radar equipment they were working on. This phenomenon was studied by Dr. Allan Frey, an American biophysicist and neuroscientist known for his research and writing during the Cold War on the nature of the microwave auditory effect, also called the Frey effect.

He worked at General Electric Advanced Electronics Center at Cornell University.

Dr. Frey found that single pulses of microwave could be heard by some people as “pops” or “clicks”, while a train of uniform pulses could be heard as a buzz, without using any type of receiver. Dr. Frey found a wide range of frequencies, as low as 125 MegaHertz (well below microwave) worked. Unclassified studies mapped out those frequencies and pulse characteristics which are optimum for generation of “microwave hearing”. He found that the sounds were not being produced from the eardrum but directly by the nerve cells in the brain itself.

Modulation – changes made to an otherwise steady signal

**Human Auditory System Response To Modulated
Electromagnetic Energy by Allan H. Frey – General
“ Electric Advanced Electronics Center Cornell
University, New York**

A significant amount of research has been conducted with the effects of radio-frequency (rf) energy on organisms (electro- magnetic energy).

Using extremely low average power densities of electromagnetic energy, the perception of sounds was induced in normal and deaf humans. The effect was induced several hundred feet from the antenna the instant the transmitter was turned on.

The perception of different sounds can be induced in physically deaf, as well as normal, in human subjects at a distance up to thousands of feet from the transmitter. With somewhat different transmission parameters, you can induce the perception of severe buffeting of the head, without such apparent symptoms as dizziness or nausea. Changing transmitter parameters down, one can induce a “pins-and-needles” sensation.

The RF sound has been described as being a buzz, clicking, hiss, or knocking, depending on several transmitter parameters, i.e., pulse width and pulse-repetition rate (PRF). The apparent source of these sounds is localized by the subjects as being within, or behind the head.

Further research into this phenomena resulted in the ability to send covert mind control messages to people – through the air.

*** * ***

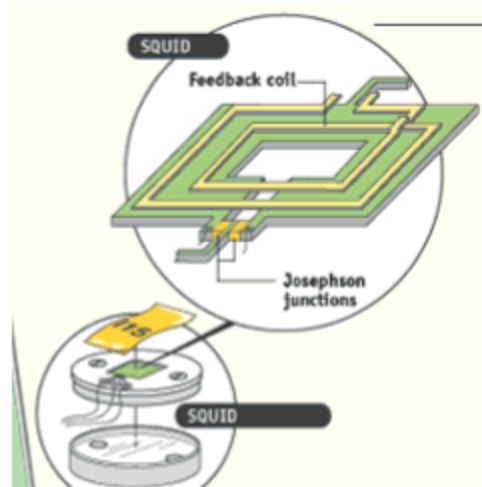

B. D. Josephson, a supporter of paranormal phenomena, postulated the Josephson effect in 1962.

This led to invention of a device known as a Superconducting Quantum Interference Device – SQUID.

The first Josephson Junction was made at Bell Labs in 1963. A Josephson junction is made up of two superconductors, separated by an insulating layer so thin that electrons can pass through.

SQUID

In June 1964 MK Ultra became MK Search.

The Direct Current SQUID was invented in 1964 at Ford Research Labs.

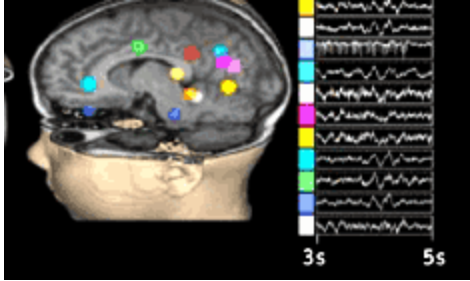

The RF (or AC) SQUID was invented at Ford Research Labs in 1965.

A SQUID is used to measure extremely weak signals, such as subtle changes in the human body's electromagnetic energy field. A SQUID can detect a change of energy as much as 100 billion times weaker than the electromagnetic energy that moves a compass needle.

It measures functional activity of the brain. Physical processes by humans and animals, such as muscular or neural activity, create magnetic fields. DC SQUIDs, contained in a helmet-like device, measure the currents created by neural activity.

Magnetoencephalography (MEG) measures magnetic fields to enable brain imaging. A computer program converts the SQUID data into maps of the currents flowing throughout the brain.

Anaesthesiaologists can use it to monitor depth of anaesthesia and level of awareness.

SQUIDS are used in the form of a helmet worn on the head, and they have also developed their use at a distance, without the helmet.

Because they measure changes in a magnetic field with such sensitivity, they do not have to come in contact with a system that they are testing.

In the film *Strange Days*, they are used to record and play back human memories, which are exchanged on the black market. The SQUID records the perceptions of a person, such as what he sees, smells, hears and feels, including emotions felt. Then the recording can be played back so that another person can experience the same perceptions as the original person.

A person wanted to see what it would be like to rob a store, he purchased the recording of a store robbery that was done by a person who was wearing a SQUID helmet during the robbery. The purchaser of the SQUID recording would then put the SQUID helmet on his head and play back the recording of the store robbery, and he would experience all the perceptions and feelings experienced by the person who performed the robbery.

Photos of the SQUID helmet from the film *Strange Days* –

In the hands of slavemasters, it is used as a mind control weapon. For example, they make a recording of a sad feeling. On a day you feel happy, they transmit the recording of feeling sad, to ruin your happy feeling. The uses for mind control are numerous. ¹²

The tiny electrical currents in the brain produce magnetic fields outside the skull, these can be measured by magnetoencephalography, or MEG. MEG measures brain currents without physical contact. Los Alamos physicists have built a MEG “helmet” that uses 155 SQUIDS to provide “whole head” brain-current images.

Measurable brain fields are produced by an evoked response, that is, the electrical activity produced in the brain in response to stimuli such as sounds or light flashes. ¹³

* * *

Richard Helms, Director of the CIA, wrote about CIA mind-control capabilities in 1965. He spoke of “sophisticated approaches to the ‘coding’ of information for transmittal to population targets in the ‘battle for the minds of men’... to control behavior.”

“

Due to Project Pandora, it is now known that applied biological (and other) frequencies can also be used

biological (and other) frequencies can also be used as direct “information inputs” (e.g., of feeling or emotion) and to reinforce brain rhythms associated with conditioning and information processing. One way to get such a signal into a human may be through use of a high frequency carrier frequency.

There is no U.S. law specifically regulating these types of transmission.

The public’s conception of “subliminals” is naive compared to capabilities.

*** * ***

In 1965 the Moscow Signal was discovered. The American embassy in Moscow was being saturated by high levels of microwaves. This discovery was kept secret, and the embassy employees were not told of this. Instead, it was decided to study the side-effects on the people in the embassy.

A Dr. Milton Zaret who was a leading microwave scientist, was recruited by the CIA, for Project Pandora, based at Walter Reed Army Institute of Research. Dr. Zaret claimed that the CIA wanted to know “whether I thought electromagnetic radiation beamed at the brain from a distance could affect the way a person might act,” and “could microwaves be used to facilitate brainwashing or to break down prisoners under investigation.”

The Pandora scientists subjected monkeys to highly concentrated microwave frequencies, in order to study the biological effects.

Back at the American embassy, Ambassador Stoessel, whose office was situated at the beam’s center, suffered blood disease, bleeding eyes, nausea, and eventually lymphoma.

The Russians were also beaming waves at American citizens in the northwest United States, to pacify them – a tranquilizing wave.

Other frequencies, besides microwave, can also be used to affect

the mind and body.

Jose Delgado (whose work was underwritten by the CIA and Navy) subjected humans to intense radio waves directed at specific portions of their brains. He reported that they experienced various emotions, sensations, and “colored visions”. Dr. Delgado also said that he thought these invisible weapons were “more dangerous than atomic destruction.” He also said **“we may transform, we may shape, direct, robotize man. I think the great danger of the future is... that we will have robotized human beings who are not aware that they have been robotized.”**

* * *

On 30 June 1966 Richard Helms became Director of the CIA. One of the first things he did was pour the coals on getting results in the mind control field. Old projects were resurrected, abandoned projects were reactivated. Helms resurrected Subproject 94, brain implants.

Operation Resurrection was a subproject of MK Search. An isolation chamber had been constructed earlier by Dr. Ewen Cameron at the Allan Memorial Institute (as part of [MK Ultra subproject 68](#)) and this was then rebuilt at a laboratory of the National Institutes of Mental Health.

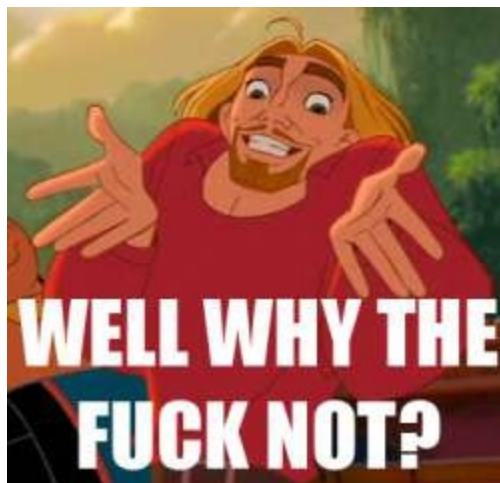

Instead of humans, like Cameron had used, apes were to be subjected to a cruel combination of treatments in these experiments that occurred in 1965/66. First they were lobotomized, then kept in total isolation. The radio telemetry techniques that had been developed by Leonard Rubenstein earlier, were adapted so that radio frequency energy could be beamed into the brains of the obviously highly disturbed animals. ¹⁷

Many of these traumatized apes were then decapitated and their heads would be transplanted onto another body to see if the RF energy would bring them back to life.

Heads transplanted?

That was their attitude – they literally went completely Dr. Frankenstein on this one.

The apes that were not killed in this way were later bombarded with radio waves until they fell unconscious.

Autopsies revealed that their brain tissue had literally been fried.

In the [Human Drug Testing by the CIA](#) section of the 1977 Senate hearings, (p 90)

Senator Kennedy. Was the NIH involved in any of the research projects?

“

Dr. Geschickter. There was NIH involvement.

Senator Kennedy. Could you tell us the nature of that involvement?

Dr. Geschickter. I can tell you the nature of it accurately. One was an studies on convulsion which

accurately. One was on studies on concussion which they rocked the heads of animals back and forth to try to cause them amnesia by concussion of the brain. And that was for \$110,000. The other, which was funded through this later business was **the use of radar to put monkeys to sleep**, to see if they could be, should I say, instead of Mickey Finn, they could put them under with radar directed toward the monkey brain.

Senator Schweiker. Could they?

Dr. Geschickter. Did they go to sleep?

Senator Schweiker. Yes.

Dr. Geschickter. Yes, sir. But, Senator, it showed if you got into too deep a sleep, **you injured the heat center of the brain** the way you cook meat, and there was a borderline there that made it dangerous.

Dr. Charles Freeman Geschickter

Yikes! Would you get a load of that guy?

Subproject 62, conducted at National Institutes of Health by Dr. Maitland Baldwin, a neurosurgeon.

Dr. Maitland Baldwin

Documents [concerning Subproject 62](#) at Black Vault, describe Baldwin's interest in sensory isolation experiments and a status report stated that, "certain kinds of radio frequency energy have been found to effect reversible neurological changes in chimpanzees."

In the publication resulting from Subproject 62, entitled, "*Effects of radio-frequency energy on primate cerebral activity*," Baldwin, Bach and Lewis thank the Naval Research Laboratory and Rome Air Force Base for supplying equipment used to generate the radio waves.

Maitland Baldwin later received funding within MK Search. The brain surgeon's continued research of behavior modification within MK Search Subproject 1 reportedly included experiments involving sensory deprivation, radio frequency energy, an attempt to cut off a monkey's head and attach it to the decapitated body of another monkey. ¹⁸

* * *

As an example of Slavemaster insane desperation to prove "men were animals and could be controlled like animals" one of the crazier projects to be revived by Helms was the less than successful

SENSORY DEPRIVATION

Sensory deprivation image from the film The Mind Benders

Renamed Operation Spellbinder, the assignment was to create a sleeper killer, a real “Manchurian Candidate.”

A Hypnotist was recruited from the American Society of Clinical and Experimental Hypnosis.

(this is probably the named – on CIA docs – psychiatrist at Ionia)

He became known among the Agency staff as “Dr. Fingers” and was selected because his file stated that he would have no qualms about carrying out potentially terminal experiments. ¹⁹

The stated intended victim was Fidel Castro, but here again, control of another person’s decisions and actions failed. After several of these failed attempts, the project was then written off, *theoretically*.

* * *

In 1967, Zdenek Rejdák introduced the term psychotronics, intended to replace the term parapsychology.

The main objectives of psychotronics were to verify and study the phenomena of telepathy, clairvoyance and psychokinesis.

The term psychotronics came to have another meaning – the use of machines that send out waves that carry psychic warfare messages and can also be used to cause illnesses.

Zdenek Rejdák

The term **Psychic Warfare** is essentially the idea of using people with psychic abilities to spy on an enemy and to place thoughts into the minds of an enemy. When machines are used to place thoughts into an enemy, or to make him ill from the emanated waves, it is called psychotronics.

The United States Intelligence community was rattled by reports that Russia had made great strides in the science of mental/spiritual feats that might be used as weapons. Some of the evidence was in the 1970 book *Psychic Discoveries Behind the Iron Curtain* – the United States was far behind Russia.

The Russians had achieved breakthroughs in psychotronics. The American intelligence community was well aware that ‘psychotronics’ meant something psychically aggressive with real applications, something that threatened the well-being of the American nation.

American intelligence was alarmed at the prospect that the Soviets would ‘get ahead.’

And so the phrase ‘**the psychic warfare gap**’ came into existence. The intelligence community spent \$20 million over the next 16 years on psychic warfare research. ²⁰

American intelligence agencies acted quickly to recover from the Psychic Warfare gap.

The CIA Office of Research and Development was interested in parapsychology. ^{21, 22}

Agency officials wanted to know:

- **whether psychics could read minds or control them from afar (telepathy),**
- **if they could gain information about distant places or people (clairvoyance or remote viewing)**

- if they could predict the future (precognition)
- influence the movement of physical objects or even the human mind (telekinesis).

Scientology responded by releasing OT levels in 1967 and 1968 – with exteriorization drills and intention drills that placed a thought into the mind of another person. **These original OT levels correspond exactly with Psychic Warfare skills – psychic spying and psychic influencing.**

The abilities for OT 4 through OT 7 were stated in Advance magazine.

Page images – (click to enlarge)

[Advance! Issue 19 June/July 1973, Your Route to Operating Thetan](#)

Text – Particularly note OT Levels IV, V, VI, and VII – they relate to psychic warfare skills.

“

OT IV – As an OT IV you will be an exterior being, fully certain of yourself.

OT V – You will do drills outside your body to become acquainted again with the physical universe as a thetan exterior.

OT VI – On this level you will regain your abilities as a thetan exterior to be where you want at will and be

able to influence the universe of others.

OT VII – OT VII involves OT intention and OT communication. You will rehabilitate and regain your ability to project intention across a distance.

One of the most important people in the efforts to close “the psychic warfare gap” was Dr. Hal Puthoff, who was in Naval Intelligence and employed by the National Security Agency. Ingo Swann was in military intelligence and worked for the United Nations. Pat Price was another person who was involved.

These three people became Scientologists and they finished the OT levels in 1969 and in 1971. They then got together at Stanford Research Institute. Scientific development of psychic spying and psychic influencing began. The research was funded by the CIA – Hal Puthoff, Ingo Swann and Pat Price were all on the CIA payroll.

CIA scientist Richard Kennett (l) posing with Pat Price and Hal Puthoff, after a successful glider-to-ground remote-viewing experiment near Menlo Park. Smiles (and plaid trousers) all round.

Richard Kennett is a pseudonym for CIA officer Ken Kress aka Christopher Green.

Scientology and the CIA were working together on yet another

project. Ron Hubbard and many other Scientologists **worked for the CIA continuously** on various CIA projects – drug trafficking, peddling LSD, behavior modification research, mind control research, psychic warfare research, and assistance to CIA political operations.

The CIA was headed by British intelligence operatives. Hubbard was also a British intelligence operative.

See Scientology Roots Chapter [Nine – 1](#) and [Nine – 2](#) **Hubbard's Lifelong Intelligence Career.**

The British family that heads British intelligence is the Cecil family. They created the Society for Psychical Research in 1882, it is **their** group. It was the scientific investigation into mental and spiritual phenomena.

It was the first practice of Scientology and these people were the first Scientologists.

The American Society for Psychical Research (ASPR) is also their group.

We have several British intelligence front groups working together – the CIA, Society for Psychical Research, and the Church of Scientology – to develop psychic warfare capabilities for the United States. That research includes development of psychotronics machines that are used as a mind control weapon and also serve as a biological warfare weapon that can cause serious illness and even death; a silent gun to commit an invisible crime.

In September 1971 a CIA officer went to the New York Parapsychological Association.

He was looking for people with psychic abilities that the CIA would fund for research.

New York Parapsychological Association is closely associated with the ASPR. ²³

In October 1971 Dr. John Wingate, in consultation with other members of the ASPR in New York, invites Ingo Swann to work on psychic experiments with Dr. Karlis Osis at ASPR.

Dr. Osiris, ASPR

Ingo Swann is involved in OOB (out-of-body) perception experiments at ASPR, the task being to verbally describe objects out of his sight in a target tray. He hits upon the idea of doing sketches, and this becomes part of the procedure of remote viewing.

Swann later admitted he could not exteriorize and he had no idea how to exteriorize. ²⁹

So...the fabulous OT levels didn't work.

Imagine that.

On 8 December 1971 Ingo Swann performs the first "remote viewing" experiment ever. The goal was to try to describe the weather conditions in various cities. Swann was able to do it. Swann suggested the term 'remote viewing'- since a distant city was remote from the experimental lab in New York. It was called out-of-body viewing. ²⁴

Ingo Swann is still doing remote viewing at the American Society for Psychical Research.

**Vera Feldman acted as the outbound experimenter.
As usual, I sat in the OOB Chair.**

At an agreed start time, I would commence trying to describe where she was. At five minute intervals, Vera would move to another location, and again I would try to describe where she was. The target location was the Museum of Natural History in New York, a few blocks away from the ASPR building.

10:45 AM – I think she's in a room that's round with a hallway and a flight of stairs to the south. There are large paintings on the wall. (Almost correct.)

10:50 AM – She's in a large room that is darkened. There are lots of animals. (Correct)

**10:55 AM – I guess that must be a long corridor and there is a telephone booth nearby.
(Correct)**

**11:00 AM – That's the room with the dinosaurs in it.
(Correct)**

**11:05 AM – I see something red. Maybe it's a series of stones of some sort. That one seems confused, whatever it is. Lots of cases filled with things.
(Correct)**

We began joking about the fact that ESP could be used for psychic spying, etc.

On 30 March 1972 Ingo Swann writes to Hal Puthoff –

I have been working for several months now in two directions, firstly at the American Society for Psychical Research on trying to increase visual

capacity by extrasensory modes, and secondly at City College with Dr. Gertrude Schmeidler on certain psychotronic and psychokinetic effects. ²⁴

Gertrude Schmeidler – working on experiments

On 15 April 1972, physicist Dr. Russell Targ meets with CIA personnel from the Office of Strategic Intelligence (OSI) and discusses the subject of paranormal abilities. Targ reveals that he has contacts with people who purport to have seen and documented some Soviet investigations of psychokinesis. Films of Soviets moving inanimate objects by “mental powers” are made available to analysts from OSI.

Russell Targ

Targ had recently joined the Stanford Research Institute (SRI). Targ was also a member of the MK Ultra off-shoot organization, *A Course In Miracles*. Targ proposed that some psychokinetic verification

In Miracles. Targ proposed that some psychokinetic verification investigations could be done at SRI with Hal Puthoff. ²⁵

Phyllis Cole was Russell Targ's research assistant. She was a Scientologist. ⁴⁸

Russell Targ and Phyllis Cole

* * *

On 19 May 1972 President Richard M. Nixon writes a letter to Henry Kissinger and Alexander Haig –

“ The performance in the psychological warfare field is nothing short of disgraceful.

We finally have a program now under way but it totally lacks imagination and I have no confidence whatever that the bureaucracy will carry it out. I do not simply blame Richard Helms and the CIA. ²⁶

Hal Puthoff headed the CIA's Remote Viewing Program at Stanford Research Institute from 1972 to 1985.

An ORD Project Officer then visited Targ who had recently joined the Stanford Research Institute.

Targ proposed that some psychokinetic verification investigations could be done at SRI with Puthoff.

These proposals were quickly followed by laboratory demonstration. A man was found by Targ and Puthoff who apparently had psychokinetic abilities.

On 4 June 1972, Ingo Swann joins Hal Puthoff at SRI. ²⁴

Swann was taken on a surprise visit to a super-conducting shielded magnetometer being used in quark (high energy particle) experiments by Dr. A. Hebbard of Stanford University Physics Department.

On 27 June 1972, Hal Puthoff sent a letter to Ken Kress, who at the time was only a young analyst, informing him of positive Varian Hall magnetometer results during an experiment with psychic Ingo Swann.

Puthoff and his magnetometer

CIA officer Ken Kress discussed some of the details of this experiment. ²⁸

...when the subject placed his attention on the interior of the magnetometer, the output signal was visibly disturbed, indicating a change in the internal magnetic field. Several other correlations of his mental efforts with signal variations were observed.

These variations in the magnetometer were never seen before or after the visit. The event was summarized and transmitted to the Agency in the form of a letter to an OSI analyst and as discussions with OTS and ORD officers. ²⁷

Ken Kress aka Christopher Green

Ingo Swann allegedly uses his “ability to exteriorize” to spy on Russia, for the US Intelligence community.

Pat Price was the best at remote viewing. In one experiment Price remote viewed a US military secret base and accurately described it, even reading the papers on the desks.

Ingo Swann then set up a training program to teach others how to do Remote Viewing.

Ingo Swann

To test Swann's program, CIA officer, Major Ed Dames, and five others go to SRI as a training group. The results were more than anyone had anticipated. Major Dames says that within 6 months the team members were producing psychically derived data with more consistency and accuracy than the most renowned natural (untrained) psychics in the world.

Major Dames then acts as the Training and Operations Officer at the SRI Remote Viewing Program for "a new psychic intelligence community". They were using the ability to remote view for spying purposes. ³⁰

26 July 1972 – Report of an Out-of-Body Experiment Conducted at the American Society for Psychical Research: Participants: Dr. Carole Silfen, Janet Mitchell, Ingo Swann. The report describes an out-of-body viewing experiment of the same day, the results of which are highly suggestive that a point of perception exterior to the body is able to assume "at a different location the functions performed by the visual system and the brain in the body." ²⁴

A Defense Intelligence Agency report "Controlled Offensive Behavior – USSR" is published in July 1972.

The Soviet Union is well aware of the benefits and applications of parapsychology research. Many
“ **scientists, U.S. and Soviet, feel that parapsychology can be harnessed to create conditions where one can alter or manipulate the minds of others.**

Soviet knowledge in this field is superior to that of the U.S. The potential applications of focusing mental influences on an enemy through hypnotic telepathy have surely occurred to the Soviets

telepathy have surely occurred to the Soviets.

Control and manipulation of the human consciousness must be considered a primary goal.

Soviet efforts in the field of psi research, might enable them to do some of the following:

- (a) Know the contents of top secret US documents, the movements of our troops and ships and the location and nature of our military installations**
- (b) Mould the thoughts of key US military and civilian leaders at a distance**
- (c) Cause the instant death of any US official at a distance**
- (d) Disable, at a distance, US military equipment of all types, including spacecraft.** ³¹

Note –

parapsychology – science investigating mental telepathy, clairvoyance, psychokinesis

clairvoyance – able to perceive matters beyond the range of ordinary perception

psychokinesis – moving a material object by influence of the mind

psi – the aggregate of parapsychological functions of the mind including extra sensory perception, precognition, and psychokinesis

CIA Office of Technical Service Contract 8473 is dated 1 October 1972 – it is a \$50,000 research contract with “the physicists at SRI” for an “expanded effort in parapsychology.” CIA officer Dr. Ken Kress is assigned to be the CIA Project Officer over the remote viewing project. ^{32, 33}

Ken Kress aka Christopher Green on the left, in this picture.

CIA scientist Richard Kennett (*l*) posing with Pat Price and Hal Puthoff, after a successful glider-to-ground remote-viewing experiment near Menlo Park. Smiles (and plaid trousers) all round.

The CIA-funded remote viewing lab at SRI continued for about 20 years.

Swann arrived to begin his CIA contract at Stanford Research Institute a few days before Christmas 1972. ³²

* * *

Jolly West had done behavior modification research for the CIA. In was MK Ultra subproject 43. He researched hypnosis, isolation and sensory deprivation methods of behavior modification. ³⁴

Louis Jolyon “Jolly” West

West proposed a Center for the Reduction of Violence. The idea was to establish a remote location where young children would be brought to treat them with behavior modification methods **before** they turned into a criminal.

William Sargant and Jolly West had driven out to a former Nike missile site in the Santa Monica Mountains.

It was the location that West and Sargant thought would be good for their proposed treatment center. ^{35, 36}

West submitted a proposal for one of these ‘special units’ to be in California at a former Nike missile base.

It was to be funded by a funding conduit for MK Ultra – the Law Enforcement Assistance Administration.

West had proposed that he and Sargant would work together, using Sargant’s previous research into

“the pharmacology of violence-producing and violence-inhibiting drugs.” ³⁷

Some of the planned areas for the Center include studies of violent individuals, “pre-delinquent” children, and experiments on hyperkinetic children. ³⁶

On 11 January 1973 Governor of California, Ronald Reagan, announces plans for a “Center for the Study and Reduction of Violence,” to be headed by Dr. Joylon “Jolly” West. The center is to serve as a model for future facilities to be set up throughout the United States.

Earl Brian, Secretary of Health, is adamant about his support for **mind control centers** in California. He feels that the **behavior modification** plans of the Violence Control Centers are important in the prevention of crime.

The California legislature could see what was happening and

The California legislature could see what was happening and labeled the idea, “Nazi science”.³⁸

West’s behavior modification specialties include hypnosis, drugs, sensory deprivation, brain surgery, electrodes planted in the brain to control people, and electronic devices to track and monitor his victims.

Brain surgery, drugging, electric shock, electrodes in brains to control behavior...

What is wrong with those guys...

Senator Sam Ervin was investigating abuses of human rights in relation to CIA mind control research.

Senator Ervin squeezes LEAA head Mr. Santorelli about the West proposal –

The use of human subjects in biomedical and behavioral research raises several fundamental constitutional and ethical questions, and I believe LEAA must develop guidelines adequate to protect fully the constitutional rights of the subjects

adequate to protect fully the constitutional rights of the subjects of LEAA-funded research in these areas.

Since last March a great deal of information pertaining to the UCLA Center has come to my attention. Much of this information indicates that programs are being contemplated for the Center that raise profound moral and constitutional questions, and it would be extremely desirable for LEAA to conduct a comprehensive review and evaluation of the projects under consideration.

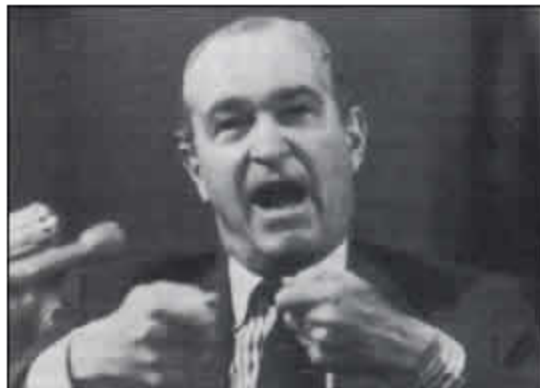

Santorelli was forced to back down and Jolly West did not get funding.

* * *

In January 1973, tipped off about forthcoming investigations, CIA Director Richard Helms ordered Sidney Gottlieb to destroy all MK Ultra records. In testimony to the Church Committee three years later, Richard Helms confessed that the CIA had destroyed the files – “so that anybody who assisted us in the past would not be subject to follow-up questions, embarrassment if you will.”

Dr. Gottlieb has testified, and former Director Helms has confirmed, that in ordering the records destroyed, Dr. Gottlieb was carrying out the verbal order of then DCI Helms. ³⁹

This was a cover-up action to hide the atrocities committed and **the men who were involved in doing the research and committing those atrocities.**

"We have no answer to the moral issue."
CIA director RICHARD HELMS, on the Agency's
MKULTRA programme of illegal experimentation with

Ron Hubbard and other Scientologists had been involved in CIA secret mind control research, including assisting CIA drug trafficking, drug peddling, and were involved in CIA political operations. Reports about these immoral activities were circulated between governments around the world.

On 20 April 1973 Ron Hubbard wrote the Snow White program, telling the Guardian Office to get all government files on himself and on Scientology. This action is in conjunction with the CIA cover up of its mind control research projects.

Hubbard pretended that false reports about him and other Scientologists had been circulated to governments – such things as accusing Sea Org ships of drug running and being a CIA ship. But, these reports that Hubbard called false, **were actually true!** Hubbard's Snow White program was really an effort to cover up the crimes and illicit actions of Scientologists.

At the same time, Ron Hubbard and the CIA are engaging in cover up actions.

The Guardian Office Intelligence Bureau infiltrated government offices to obtain their files on Hubbard and Scientology. Various illegal means were used, such as using lock picks to open locked doors and file cabinets.

These cover ups mark the initial stages of removing Hubbard as the Scientology front man. The illegal activities led to an FBI

as the front man. The illegal activities led to an FBI raid in 1977. Hubbard went into hiding to avoid prosecution, and in 1981 a new front man was installed to run the Church.

Ron Hubbard – 1973 television documentary

*** * ***

The CIA continued to research and develop mind control weapons but not under the code name MK-Ultra.

The first successful transmission of the human voice directly into the skull of a living person was demonstrated by Dr. Joseph Sharp at the Walter Reed Army Institute of Research in 1973. ⁴⁵

Joseph Sharp found that –

“ ...appropriate modulation of microwave energy can result in direct “wireless” and “receiverless” communication of speech. They recorded by voice on tape each of the single-syllable words for digits between 1 and 10.

By radiating themselves with these “voice-modulated” microwaves, Sharp and Grove were readily able to hear, identify, and distinguish among the 9 words.

The capability of communicating directly with a human being by “receiverless radio” has obvious

* * *

Hal Puthoff and SRI were also researching projecting words and images into the skull.

In April 1973 Hal Puthoff, Russell Targ and Phyllis Cole researched esp enhancement through machines. ⁴¹

Concrete evidence that electronic mind control was the true object of study at Stanford Research Institute was exposed by the Washington Post. When the Navy awarded a contract to the Institute, “the scientific assistant to the Secretary of the Navy, Dr. Sam Koslov, received a routine briefing on various research projects, including SRI’s. As the briefer flashed his chart onto the screen and began to speak, Koslov stormily interrupted, ‘What the hell is that about?’ Among the glowing words on the projected chart, **the section describing SRI’s work was labeled ... ELF and Mind Control.**

‘ELF’ stands for extremely low frequency electromagnetic waves, from the very slow brain frequencies up to about 100 cycles per second. But the Mind Control label really upset Koslov. He ordered the SRI investigations for the Navy stopped, and canceled another \$35,000 in Navy funds slated for more remote viewing work. Contrary to Koslov’s attempt to kill the research, the Navy quietly continued to fork out \$100,000 for a two-year project directed by a bionics specialist.”

The “remote viewing” team at SRI was really engaged in **projecting words and images** directly to the cranium.

It was not a humanitarian pastime: the project was military and test subjects are subjected to a lifetime of EM torture plied with the same thorough disregard for human rights as the radiation tests conducted at the height of the Cold War. The treatment subjects have received at the hands of their own government would be considered atrocities

if practiced in wartime.

Mind control was also used in domestic covert operations designed to further the CIA's heady ambitions, and during the Vietnam War period SRI was a hive of covert political subterfuge. The Symbionese Liberation Army, like the People's Temple, was a creation of the CIA. The SLA had at its core a clique of black ex-convicts from Vacaville Prison. Donald DeFreeze, otherwise known as "Cinque", led the SLA. He was formerly an informant for the LAPD's Criminal Conspiracy Section and the director of Vacaville's Black Cultural Association (BCA), a covert mind control unit with funding from the CIA channeled through SRI.

The Menlo Park (SRI) behavior modification specialists experimented with psychoactive drugs administered to members of the BCA. Black prisoners were programmed to murder selected black leaders once on the outside. The CIA/SRI zombie killer hit list included Oakland school superintendent Dr. Marcus Foster, and Panthers Huey Newton and Bobby Seale, among others. DeFreeze stated that at Vacaville in 1971-72, he was the subject of a CIA mind control experiment.

He described his incarceration on the prison's third floor, where he was corralled by CIA agents who drugged him and said he would become the leader of a radical movement and kidnap a wealthy person. After his escape from Vacaville (an exit door was left unlocked for him), that's exactly what he did. He kidnapped Patty Hearst.

EM mind control machines were championed at SRI by Dr. Karl Pribram, director of the Neuropsychology Research Laboratory: "I certainly could educate a child by putting an electrode in the lateral hypothalamus and then selecting the situations at which I stimulate it. In this way I can grossly change his behavior." [Psychology Today](#) touted Pribram as "The Magellan of Brain Science."

Pribram

At SRI he studied how the brain processes and stores sensory imagery. He is credited with discovering that mental imaging bears a close resemblance to hologram projection. ^{33, 42, 43}

Washington Post article –

“ **Concrete evidence that electronic mind control was the true object of study at Stanford Research Institute** was exposed by the Washington Post in 1977. When the Navy awarded a contract to the Institute, “the scientific assistant to the Secretary of the Navy, Dr. Sam Koslov, received a routine briefing on various research projects, including SRI’s. National Security Agency facility at Sugar Grove, Virginia

Satellite dishes at the Pentagon/NSA facility near Sugar Grove, West Virginia, as it looks today. The underground facility described by SRI remote viewers is nearby.

Some Remote-Viewing data generated by Swann and Price, June 1973 – of Sugar Grove NSA secret facility.

Weather at this time is cloudy, rainy. Temperature at my altitude about 54° - high cumulo nimbus clouds to about 25,000-30,000'. Clear area, but turbulent, between that level and some cirro stratus at 46,000'

Air mass in that strip moving W.N.W. to S.E.

1318 - Perceived that peak area has large underground storage areas. Road comes up back side of mountains (west slopes), fairly well concealed, looks deliberately so. It's cut under trees where possible - would be very hard to detect flying over area. Looks like former missile site-bases for launchers still there, but area now houses record storage area, microfilm, file cabinets; as you go into underground area through aluminum rolled up doors, first areas filled with records, etc. Rooms about 100' long, 40' wide, 20' ceilings with concrete supporting pilasters, flare-shaped. Temperature cool - fluorescent lighted. Personnel, Army 5th Corps engineers. M/Sgt. Long on desk placard on grey steel desk - file cabinets security locked - combination locks, steel rods through eye bolts. Beyond these rooms, heading east, are several bays with computers, communication equipment, large maps, display type, overlays. Personnel, Army Signal Corps. Elevators.

"Top of desk had papers labeled:

Flytrap

Minerva

File cabinet on north wall labeled:

Operation Pool -- (2nd word unreadable)

Folders inside cabinet labeled:

Cueball

14 Ball

4 Ball

8 Ball

Rackup

Some of the data generated by Ingo Swann and Pat Price on the Sugar Grove site in June 1973.

They were accurate enough for the Pentagon to launch a security investigation. [CIA]

By 13 June 1973 Ken Kress aka Kit Green is in some hot water at the NSA.

“

Wednesday, 13 June 1973 CIA's (Kit Green) finds himself at the center of an intense and hostile security investigation over the “coordinate remote viewing” descriptions of Scientology OTs Pat Price and Ingo Swann of the secret installation in West Virginia. The investigation soon extends to Price, Swann, and OT VII Hal Puthoff at SRI.

The facility, ostensibly a U.S. Navy communications base, is actually a highly sensitive NSA installation.

Remote Viewers: The Secret History of America's Psychic Spies by Jim Schnabel – Dell (1997)

An Interview with Ingo Swann, ADVANCE! Issue 21,
October/November 1973

A Scientology OT in action in the world

An Interview with Ingo Swann

Ingo Swann, full OT VII and Class VI Auditor, is a soft-spoken and very charming individual who has brought Scientology into the scientific and public eye through demonstration of his OT abilities.

Ingo, born in the state of Colorado on September 14th, 1933, came from a Swedish background.

He attended Westminster College in Salt Lake City, Utah, and there earned a degree in Art and Biology in 1955. After college Ingo took advantage of Army service in the Far East by studying aesthetics and art with oriental instructors.

Ingo continued his work in art after the Army and in 1958 took it up as a career in New York City.

Talented and well-known as an artist, Ingo's works hang in many public and private collections and have been in several exhibitions. His art, fascinating and beautiful in quality, is oriented toward cosmic and theta (spiritual) themes.

Ingo entered Scientology in 1966 and began to expand his awareness and increase his abilities. Scientology had, of course, a decisive influence on his art.

While working on his art, Ingo up to 1969 also held a position with the United Nations' Secretariat.

In 1969, Ingo took the Saint Hill Special Briefing Course and then the Clearing Course and attained the state of Clear. From Clear he went up the OT Levels.

In 1971, for his own interest as an OT, Ingo began experimenting, and then began working in earnest, with his OT abilities under strict scientific conditions with trained scientists.

Since 1971, he has worked on various experiments including changing the state of objects at a distance without physical means, and "out-of-the-body" experiments with the American Psychical Research Society, then in special experiments in New York City College, and with the Stanford Research Institute.

The results of these experiments have caused considerable stir in the scientific field. Numerous articles and

mentions on Ingo and his abilities have appeared in newspapers and magazines including "Time", the "Smithsonian" and "Psychic".

Ingo, by 1973, had firmly established himself in the world of science and parapsychology as an individual of very advanced abilities and awareness.

Recently Ingo gave a presentation on Scientology to a Congress of parapsychological researchers and scientists in Prague, Czechoslovakia and received a very positive reaction and created considerable interest in Scientology.

In the following interview Ingo discusses his experiences in his rather

your work in relationship to your OT abilities?

INGO: Actually it's not work, it's play. Somewhere along the way I got the idea that if one is an OT one should start being an OT. I've always been interested in science and parapsychology and I started to play around with various laboratories in New York. And pretty soon we had theta interaction with Mest which has attracted the interest of official researchers all over the world now, I think.

ADVANCE!: What demonstrations have you provided which you feel were successful or convincing?

Ingo Swann: "My greatest win on the OT Levels I think was the ability to separate myself from matter, energy, space and time."

unusual field and describes how he gained these abilities through Scientology.

ADVANCE!: Mr. Swann, you are both a famous new-age artist and a psychic of international renown. We would like to discuss aspects of being a psychic. In this regard, how would you describe your work in relationship to your OT abilities?

INGO: I always make it one of my first duties to make a disclaimer on the word psychic. It's a word that I've become saddled with, and I've protested that for quite a while.

But in the historical sense of the word psychic, I'm not a psychic at all since I know where my abilities come from and most psychics don't, or have not had opportunity to find out as yet.

So I don't refer to myself as a psychic.

There were two parts to that question. What was the other part?

ADVANCE!: How would you describe

INGO: Well, I think it's a matter of who's looking at the data.

You see, it's not a matter of producing demonstrations which I feel are convincing because in science, especially in this parapsychological realm, personal claim is not what scientists are looking for. They are looking for something that they themselves can observe, which is real to them. And they have every right to do that, since that's the purpose of science.

So I have worked with several famous parapsychologists together and I have explained what I felt I could do in the realm of demonstration, and they have explained what they felt they could do to support the existence of this kind of phenomena should it occur. And we've made compromises about how to get the demonstration.

One of these has been the increase of temperature in a small distant object, which we've replicated many many times, and it looks like a rather convincing demonstration. This was at

City College in New York.

And then at the American Society for Psychical Research, although I don't have absolutely perfect perceptics while out of the body, I have enough to have demonstrated that that does exist and when statistics were judged, when statistics of the experiments were judged by independent researchers they said that apparently perception had taken place and that the chance of the statistics was only once in every forty thousand. So it was a pretty good start.

Now these two things are published data which have been accepted more or less by the scientific establishment. It was reasonably good experimentation.

ADVANCE!: How would you describe the abilities in Scientology terms which you have had occasion to publicly demonstrate?

INGO: Thetan interaction with matter, energy, space and time; bypassing the body.

ADVANCE!: How did these abilities develop with relationship to your auditing on the OT Levels?

INGO: They are solely the result of auditing. Not particularly even the OT Levels.

I had extremely good gains from lower grades. And some had developed certainly by the time Power Processing took place.

But steady good control over them, the control I have now — which is not

that Scientology holds philosophically. And they don't understand the technological aspects of it. Of course, too, they've not yet taken the opportunity to study and read it.

I chose this field because it was the natural place to go poke around — and since I felt I needed respectable witnesses to these kind of phenomena and I found them amongst parapsychologists, many of whom were very skilled.

ADVANCE!: The people you work with in parapsychology, have you explained to them the concept of OT?

INGO: I have a pretty good standard operating procedure to answer questions that I'm asked. And I have, to the degree that there has been interest, answered questions.

Also I have standard policy not to force on them data that I don't feel is wanted. That would not be the purpose there.

But as you know I gave a presentation on Scientology at the Congress in Prague. The paper was extremely well received and there have been several requests from participants there to have the paper and I've sent it. And I'm getting very nice comments back on it, too.

I sort of felt that being a Scientologist by exemplary attitude and work capacity, I would probably do a great deal there. Whereas, it's not within the scientific paradigm to try to convince

than good ones then I would, of course, cease to do it.

However, I don't have any direct evidence now that I should stop since the interest is growing right and left.

ADVANCE!: What goals do you have as regards your general activities?

INGO: We have many OTs who are contributing to strengthening the concept of Scientology in churches and in building missions where people can come get auditing and things like that.

I often wondered that the time will come when OTs must step into the public domain and begin to contribute their weight. It seems like a logical step and many OTs are doing that.

And I thought I would like to be one of them and see how far I could go.

The goal I've been working on was to see if a Scientologist, an OT, could work in cooperation with the scientific establishment.

This means to create a body of work which is equally respected by their criteria as it would be by ours. And this means from getting the approval, or at least the attention of the Academy for the Advancement of Sciences on down through research establishments and educational institutions. It seems like there is such a need there for the data that Scientology can bring.

ADVANCE!: What goals do you have

perfect by the way — occurred after the completion of OT III Expanded, and is even better than ever now that I have finished OT VII.

So they are solely the result of auditing.

ADVANCE!: Why have you chosen the particular circles you are working in, as very often they are formed of persons with committed materialist views, who have a definite bias against the traditional idea that Man is a spirit, not to mention the concept of OT?

INGO: It's true that in science there is a healthy majority of professional people who will not publicly support the concept of a spiritual being.

But in parapsychology, most of the people who are in parapsychology have had, at the subject and the research level both, convincing personal experiences of things beyond ordinary explanation. And I find that this attitude is not there amongst most of these people.

In fact, I know now, since I've done my own surveys that many of these people agree with most of the precepts

each other of something, since they take their data by observation, usually, and not by talking.

So I wondered if within the field a good convincing demonstration might be the appropriate thing.

ADVANCE!: Ron has said "Your biggest forward menace in Scientology is that the world becomes too terrified of an operating thetan." Do you feel there is a way to handle that?

INGO: I don't know.

One of the biggest problems I faced, right at first in October, 1971 was this: I was sitting in a lab with something in front of me I knew I could effect and I said, "If I effect it I've changed history, if I don't effect it I'm invalidating myself." So what was it going to be? And I chose not to invalidate myself.

Now it's probably quite true that convincing OT demonstrations do stir up a lot of apprehension but I have been very careful to observe if this occurs and to try to handle it.

If I feel that this kind of demonstration is creating more negative feelings

as regards your future Scientology training or auditing?

INGO: I'm doing Expanded Dianetics now, I've just finished Integrity Processing.

And I don't have much doubt before long I will want to do the Class VIII Course. I'm a Class VI Auditor.

ADVANCE!: Are you looking forward to OT VIII?

INGO: Yes!

ADVANCE!: How would you express your greatest wins on the OT Levels?

INGO: My greatest win on the OT Levels I think was the ability to separate myself with great conviction from matter, energy, space and time. To have gained the ability to hold my viewpoint without quivering. To have gained the ability to be appreciative of the need for an ethical, philosophic philosophy and to want to help produce towards its fullest use.

And to have the great pleasure of being at home in the universe, in which I used to be very uncomfortable.

I would like, of course, to express my appreciation to L. Ron Hubbard for making all this possible.

Well! Look at the sugar-coating the church is putting on this.

There is no mention that Ingo Swann, Hal Puthoff and Pat Price are on the CIA payroll and that the CIA is funding their research at SRI. There is no mention that they are developing psychic warfare weapons at SRI. There is no mention that SRI is developing psychotronics weapons for the military.

Rather than exposing and opposing this research — Scientology officially applauds it!

You might think that Church executives did not know what was going on at SRI. Not so! Pat Price was reporting to the United States Guardians Office intelligence staff exactly what was going on at SRI. I, Mike McClaughry, was one of the intelligence staff and I read part of the intelligence file on SRI — and they knew about the experiments at SRI. SRI was in my area of responsibility and I received no orders to do anything about it.

Thus we see that Church executives knew about it and condoned it.

Church executives knew what was going on at SRI and did nothing effective to stop it.

Why would they stop it?

The Scientology OT levels were designed to assist it!

In July 1974 Pat Price was given coordinates supplied by the CIA's

in early 1974 that Price was given coordinates supplied by the CIA to Ken Kress for remote viewing experiments. Price identifies a Soviet military research facility at the southern edge of the Semipalatinsk nuclear test area in the Kazakh Republic. The accuracy of Price's reports about the place was important in future funding of remote viewing.³²

On 15 October 1974 Pat Price departs SRI. He is going to work for a coal company in Huntington, West Virginia, telling Hal Puthoff that he intends to return in a year with a fortune earned from psychically locating coal deposits. What he doesn't tell Puthoff is that he is also going to be working directly for the CIA, with Ken Kress as his handler.³²

* * *

In November 1974, a U.S. Senate Subcommittee on Constitutional Rights investigated federally-funded behavior modification programs, and the possible threat to individual constitutional rights from behavior modification, especially involving inmates in prisons and mental institutions.

Funding and research of mind control has been done by the CIA, Department of Defense, Stanford Research Institute, U.S. Health, Education and Welfare Department, etc.

* * *

At least six CIA secret reports and memos are written from 14 January 1975 to 5 February 1975 regarding the success of the remote viewing operations with Scientology OT Pat Price.

One memorandum is concerning a test of remote viewing set up with Pat Price at Stanford Research Institute.

Having been given operational data such as exterior photographs and geographical coordinates, Price has "visited" two foreign embassies – known to CIA audio teams who had made entries several years previously.

In both cases, Price has correctly located the code rooms. He has produced copious data, such as the location of interior doors and

colors of marble stairs and fireplaces that are accurate and specific. The operations officer involved concluded, **“It is my considered opinion that this technique – whatever it is – offers definite operational possibilities.”**

The CIA entered into a personal services contract with Pat Price in March 1975. ³³

* * *

On 12 Jun 1975 two CIA reports were done about a device being used at SRI in psi research –

L. W. Rook; LSR/ORD

Memorandum for OTS/CB

Subject: Evidence for Non- Randomness of Four-State Electronic Random Stimulus Generator

S. L. Cianci; LSR/ORD

Memorandum for OTS/CB

Subject: Response to Requested Critique, SRI Random Stimulus Generator Results ⁴⁷

That is documented evidence of CIA's continuing involvement with the remote viewing program at SRI.

Also evidence of SRI developing psychotronic machines.

* * *

Pat Price leaves from Huntington, West Virginia on 16 July 1975. He is on a several-week trip West.

He first stops off in Washington, D.C. Then he continues his trip West.

In Las Vegas, Price is accompanied by an old friend named Bill Alvarez and his wife, Judy.

The three check into the Stardust Hotel and go into the restaurant for dinner.

Price begins to complain that he doesn't feel good, and ostensibly tells the Alvarezes that someone “had seemed to slip something into his coffee” at dinner in Washington “the night before.” Price soon

feels so bad that he goes up to his room to lie down. He feels even worse, and calls the Alvarezes. They come to his room and find him on the bed in cardiac arrest. Bill Alvarez calls paramedics, who try without success to resuscitate Price. Price was declared dead in the hospital emergency room.

Reportedly, a mysterious “friend” of Price’s turns up at the emergency room with “a briefcase full of his medical records,” which, along with the statements of the emergency room’s physician, apparently are enough to waive an autopsy – which would normally be performed on an out-of-towner who had died outside the hospital. ³²

Note –

The names Bill and Judy Alvarez are pseudonyms, those names are not their real names. Terry Milner was the Deputy Guardian for Intelligence at the United States Guardian’s Office when all of this was going on. He wrote an unpublished book that talked about Pat Price continually reporting about SRI to the intelligence staff at USGO. The book also talked about the death of Pat Price.

*** * ***

In 1975, Dr. Allan Frey published a study stating that microwaves with certain modulations could cause leakage in the blood–brain barrier, with possibly lethal consequences. Breaching the blood-brain barrier means that bacteria, viruses and toxins from the blood can enter the brain.

Frey's method of demonstrating this effect of microwaves was simple. He injected a dye into the circulatory system of rats, then swept the microwave frequencies across their bodies. In a matter of minutes, the dye had leached into the confines of the rats' brains.

In one experiment, he synchronized microwaves with the rhythm of a frog heart, and the heart stopped beating.

In another experiment, he microwaved cats and found that it had a huge effect on emotions.

Dr. Frey was falsely discredited by the U.S. government – meanwhile his work was taken into black status.

His microwave discoveries became a secret microwave bio-weapons program. ⁴⁶

* * *

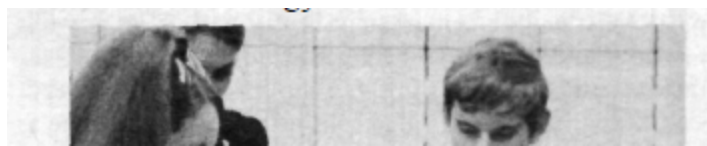

On 20 April 1976 a patent was granted for an apparatus and method for remotely monitoring and altering brain waves. ⁴⁹

In 1976, Puthoff and Targ received another 26,000 dollars from the Navy to see if magnetometers could be affected by human beings. ⁵⁰

* * *

At the end of October 1976, Quentin Hubbard was found, comatose, in a parked car in Las Vegas with the engine still running, and no identification cards present to say who he was. Quentin was taken to a hospital where he died two weeks later, without regaining consciousness. He was not identified until several days after his death. Although no precise cause of death was determined, Quentin had certainly suffered from carbon monoxide poisoning.

Mary Sue broke down and wailed when she heard the news. There was an immediate cover-up. Documents were stolen from the coroner's office and taken to Hubbard. The Scientologists were not told about Quentin's death. ⁵¹

On 8 July 1977 the FBI raids the Scientology intelligence unit in Los Angeles and obtains boxes of evidence proving the numerous black intelligence operations being run daily against Scientology critics. Mary Sue Hubbard and other Guardian Office staff were convicted and served jail sentences. Ron Hubbard went into hiding.

FBI agents ransack church files at Cedars complex. Special Agent Norbert Linker later testified that between six and eight agents spent 15 hours searching a single office.

* * *

On 3 August 1977 the 95th U.S. Congress opened hearings into the reported abuses concerning the CIA's top secret mind control

research program code named MK Ultra.

Subject of Committee: MK Ultra, The CIA's Research into Behavioral Modification.

In November 1977 a Senate subcommittee on Health and Scientific Research, chaired by Senator Ted Kennedy, focuses on the CIA's testing of LSD on unwitting citizens.

Testifying before the subcommittee is CIA's Sidney Gottlieb. Gottlieb said the purpose of the program was to

“investigate whether and how it was possible to modify an individual's behavior by covert means.”

Gottlieb stated that the program was initially engendered by a concern that the Soviets and other enemies of the United States would get ahead of the U.S. in this field. ⁵²

Now that's some chicken-dancing there.

This was NEVER about the Russians.

*** * ***

On 10 May 1978 the Stanford Research Institute remote-viewing team is called upon to rapidly try and locate, with remote viewing, a downed Soviet Tupolev-22 bomber that is configured for the gathering of electronic and photographic intelligence, and has gone down in the jungles the day before somewhere in Zaire.

The wreckage of the plane was found three miles from where the remote-viewers said.

CIA Director Stansfield Turner briefs President Jimmy Carter on the successful operation and recovery.

In 1978, the intelligence community was so pleased with the results of the SRI team that funding was massively extended. A multimillion dollar project called “Grill Flame” was brought into being under the auspices of the Defense Intelligence Agency and the Navy. The projects at SRI continued, but were greatly augmented at Fort Meade in Maryland. The U.S. Army Intelligence and Security agency became involved in the project.⁵³

The Army’s Intelligence and Security Command set up its own unit of military remote viewers at Fort Meade, Maryland. It is part of a remote viewing programme being managed by the Defense Intelligence Agency that is codenamed Grill Flame. It has been described thus: “The...researchers, in rivalry with their Soviet counterparts, were attempting nothing less than the development of the perfect spies, human beings who, undetectably and at almost zero cost, could spy upon the most remote, sensitive, and heavily guarded locations.”⁵⁴

Joseph McMoneagle worked at Fort Meade. He was one of the government’s better remote viewers.

He was also a consultant for the SRI remote viewing labs.

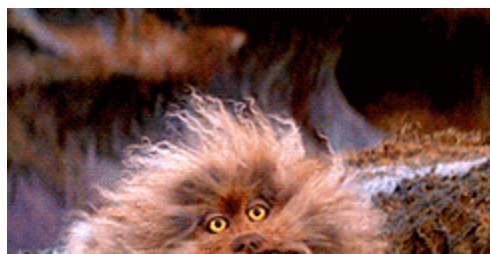

McMoneagle executed more than 200 missions.

The military became concerned about people who might remote view military secrets.

The guidance system on a nuclear missile is a magnetic field.

They were concerned about people who might affect a magnetic field.

It can’t be allowed!

So, they decided Scientology needed a re-working. A lowering of expectations, if you will.

It was time to shift Scientology's advanced levels away from focusing on spiritual abilities.

The new role model was a happy human with a great job, nice teeth, and a fat bank account.

Oh, isn't it wonderful? Says Dorothy...

Accordingly, the Church's *Advance!* magazine, shifted its focus and used Ingo Swann to do it.

Advance! magazine, issue 53, July/August 1978

chic" (OT) abilities.

Ingo is an unusual phenomenon himself in the world of psychic research. For one thing, he actually asks for strict controls (unusual for a psychic). When demonstrating his abilities, he does not go into a trance or meditate, but sits quietly, sometimes puffing on his favorite slim cigar or drinking coffee. He does not claim to be controlled by extraterrestrial beings or "spirit guides," but takes responsibility for what he does. Ingo first got into the field of psychic research after going Clear and OT in 1969. "I've always been interested in science and parapsychology and I started to play around with various laboratories in New York. And pretty soon we had theta interaction with mest, which has attracted the interest of official researchers all over the world."

Ingo's first experiments were at New York City College with Dr. Gertrude Schneider, former president of the American Society for Psychical Research. In these experiments, Ingo caused temperature changes in small graphite targets, a demonstration of PKST (psychokinesis — static target) which has been more or less accepted as valid by the scientific world.

Ingo then worked with the American Society for Psychical Research in New York on a series of tests of "out of the body" perceptions, accurately describing patterns and colors of visual targets placed high above him and out of sight.

In the spring of 1972, Ingo joined Harold Puthoff (also an OT) at the Stanford Research Institute in Menlo Park, California, for further tests.

One of the most dramatic tests of Ingo's ability was with Stanford University's "quark" detector. (Physicists theorize that the proton is composed of three subparticles called "quarks," and this complex machine was built in an effort to capture one.)

Ingo informed SRI scientists that he did not want to waste his time with any experiment that had critical loopholes. Puthoff responded by challenging Ingo to affect the quark detector, a device buried in five feet of concrete under the basement of Stanford's Varian Hall of Physics, and heavily shielded against all outside influences. Exhaustive testing had confirmed that no magnetic signals could penetrate the complex shielding.

Ingo: "Being Clear is definitely preferable to being psychic."

Even superpsychic Uri Geller had refused to test his powers against this formidable apparatus.

"Frankly, the urge to retreat was paramount," recalls Ingo, "but I quickly understood that here was an opportunity that should not be flummoxed by a pantywaist attitude." Ingo accepted the challenge.

After a few minutes of concentration, the frequency of the output signal, incredibly, doubled. There was an astonishing silence, then pandemonium broke loose.

One of the scientists giggled, and suggested that this output variation was possibly some sort of system noise. What, then, asked Ingo, would be an unequivocal test?

"Stop the trace,"

Zonk!

For about 45 seconds, the output recorder penned a flat trace. Then Ingo "let go." The room was in an uproar.

Thus began a long series of experiments at SRI, which included a number of tests of "out of the body" perceptions.

In 1973, Ingo gave a presentation on Scientology to an international congress of psychical researchers in Prague, which

was very well received.

As well as being a renowned psychic, Ingo is also a talented artist and writer. His paintings, which hang in many public and private collections, reflect his unique view of the universe and man. His books include *To Kiss Earth Goodbye* (Hawthorn, 1975), *Cosmic Art* edited by Ingo (Hawthorn, 1976), and a novel, *Star Fire*, just released by Dell in March.

ADVANCE! Ingo, we've heard a lot about your new book. Could you tell us a bit about it?

INGO: Well, it's a novel. You might say my first substantial fiction. Several years ago, in 1973, I got interested in what would happen if there emerged a real psychic. Not just the fortune-teller types, the crystal-gazers, the showmen types we are all so familiar with; but a real psychic, someone with vast powers of clairvoyance and psychokinesis. I thought then that the world both awaits and fears the emergence of such a man. It seemed to me that such a man would not be satisfied with the status quo, with the mundane sort of haphazard way the world manages along. Out of these thoughts came the novel *Star Fire*, which

Advance! July/August 1978 9

is being published this month by Dell. I don't want to say too much more, since it might spoil the book for the reader. **ADVANCE!** What are you currently working on?

INGO: I've been involved in the production of *Star Fire*, just finishing a publicity tour for it in England. This month there is a large American tour. Many TV and radio appearances, and of course hopes for a little success for the book. I have a new novel planned, a new collection of paintings to do. Last autumn the Smithsonian Air and Space Museum took three of my paintings, and this has encouraged me to work harder along this line. Then there is the research in parapsychology.

ADVANCE! How did you first get into psychic research?

INGO: I guess I have always been interested in the miraculous nature of man. I read the most turgid, thick and endless books about the so-called "higher abilities" of mankind. It all seemed very beautiful — and unfruitful.

Then came Scientology, and L. Ron Hubbard's astonishing thoughts on man as a spirit; the living, existing spirit; the living, creative possible aptitudes of spirit trying to conquer matter, energy, space and time. But conquest was only possible after the spirit got rid of its reactive banks, those dreadful counterpostulates by which the individual cuts himself down to nothing.

Well, after years of auditing and studying in Scientology, I finally arrived at a place where I could level out somewhat. I got interested in something to do in society. For some reason — which escapes me now — I thought it would be a good idea to go and volunteer as a subject in parapsychology experimentation. And thereby lies the long tale. That was almost eight years ago.

ADVANCE! How did your psychic abilities develop in relationship to your auditing on the Advanced Courses?

INGO: They are totally the result of auditing. The point of going Clear and attaining the OT Sections is to rid oneself of reactivity and to enable one to confront life better, more completely, more productively. And I view psychic abilities as only a part of that. I feel that the best achievement of OT awareness is to make whatever it is one wants to do, go right; to succeed at the goal, to accomplish, to build, to create, to participate in life and to guide it towards a sane future. OT abilities or psychic abilities are only tools towards all these things. Like anything else, you can develop them by finding out that they exist, by clearing misunderstandings about them and by utilizing them. Many people who are not Clear have substantial psychic gifts, but the bank aborts their proper creative usage.

Being Clear is definitely preferable to being psychic, but they can go together. It is the spirit, the thetan, who possesses all abilities, and he must familiarize himself with himself. He does this through training, and especially, for me, the Briefing Course, studying the dynamics of the reactive mind. This is one of Ron's greatest gifts to any OT who would truly become operational in the psychic sense.

ADVANCE! What reactions have you had from the scientific establishment to your demonstrations of theta abilities?

INGO: At first, it was difficult, and probably I should say that it still is difficult. But, too, the years have made a difference. Hundreds and hundreds of scientists have come and looked into our work, and left impressed, if not convinced. We encourage other groups to undertake repeating our own results. This

has gained fast in respectability.

At Stanford Research Institute, we developed the now world-famous remote viewing techniques, where one person goes to a distant target unknown to the subject, and the subject describes — often very well — what the distant place looks like. This particular experiment is now being tested in hundreds of schools. People are amazed at how often it works. This has been one of my goals: to rehabilitate the understanding that everyone has these abilities, no matter how suppressed, no matter how misunderstood.

A long time ago I realized that hardly anyone really cared what I could do myself. What they really wanted was to find something in themselves. The ripples in the lake widen accordingly, whereas if I insisted on being the only superpsychic around, well, what would that accomplish?

At any rate, through the years, the general scientific attitude has shifted in the direction of acknowledging that man has — I can't help but laugh a little — "higher abilities."

ADVANCE! Where do you feel that current research in parapsychology is leading?

INGO: It's leading to a place most people don't realize — into the educational system itself. Most schools now teach classes in parapsychology, although a lot of garbage goes down, of course. There are some 170 colleges and universities that give classes. Thus the upcoming generations will have a reality on the fact that psi exists — as opposed to the foregoing generations for whom it was all edited out and suppressed.

The time will come — and coming it is — when science will have to open the

STOP PRESS!

L. RON HUBBARD RECEIVES ILLINOIS SOCIETY FOR PSYCHICAL RESEARCH ACHIEVEMENT AWARD

June 27, 1978 — Oak Park Illinois

Just as *Advance!* was going to press, word was received from the Illinois Society for Psychical Research that their First Annual Award for National Life Achievement was being presented to L. Ron Hubbard. "For excellence in enhancing the study, public knowledge and growth of psychic and

The choice was hard, owing to the many, many fine men and women who have contributed to the fields of spiritual awareness and psychic information, but the final selection won by a large margin and deservedly becomes the first winner of ISPR's National Life Achievement Award.

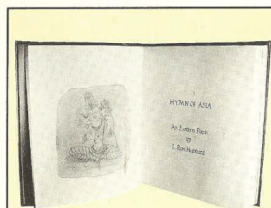

"The 1978 recipient is: L. RON HUBBARD."

the first adequate westernized version of yogic and Vedic training languages. His contributions in psychic, spiritual awareness, medical, educational, and perceptual research and teaching are many. To name a few, from L. Ron Hubbard have come successful techniques of study, of handling basic trauma and harmful life pattern decisions, of handling a person who is in

spiritual data.
In a presentation ceremony at the Oak Park Club in Oak Park, Illinois, the President of the ISPR, Carol Loch, stated:
"Many outstanding men and women were mentioned during the discussion and voting process for all our awards. The Annual Award Committee deliberated many hours on the selection of the first recipient of our National Life Achievement Award."

Ron Hubbard, who is the founder of Dianetics and Scientology, has developed techniques which are used by many, if not most, of the top psychic and spiritual awareness organizations. Some credit his work. Others do not, including an organization headquartered in San Francisco which has been called "the leading human awareness organization in the country." Hubbard has developed a language which is

and many other wide reaching discoveries.
"Many of the top psychics in the nation, including Ingo Swann, who has been called 'Super Psychic,' credit their development to Hubbard's techniques."
"We hereby award the first National Life Achievement Award to a remarkable man, L. Ron Hubbard."

A message of inspiration

Hymn of Asia

by L. Ron Hubbard

Hymn of Asia is Ron's stirring, beautifully written poetic statement of our goals and purposes on this planet, and how these carry on the 2500 year tradition of Gautama Buddha. It's a truly inspirational message of spiritual freedom and hope, a message that is as timely today as it was 2500 years ago. A challenging message for anyone who desires to bring civilization to Man.

Elegantly hand lettered and illustrated, richly bound. A volume you'll treasure for years.

Price: \$21.00 or £12.00.

Order from the Bookstore of your nearest Advanced Organization.

You'll need an E-Meter to go Clear & OT

"The only way known to learn to use an E-Meter is to use one, handle one, practice with one. Skill in meter use depends upon familiarizing oneself with the actual meter."

L. Ron Hubbard
E-Meter Essentials

Get ready to Solo Audit yourself to Clear and OT by owning an E-Meter, learning about it, drilling with it. Become a skilled E-Meter operator.

Price: \$125.00 (for the US Mark V), £195.00 (for the British Mark V) — both sturdy and reliable standard Mark V E-Meters.

Order from the AO Bookstore.

(Or, if unavailable, from your nearest Publication Organization: 4833 Fountain Avenue, East Annex, Los Angeles, California 90029; or Jernbanegade 6, 1608 Copenhagen V, Denmark.)

NOT A PIECE OF FLESH

Modern science will indeed continue to miss the boat as long as it continues to ignore the spiritual side of man. A real understanding of the phenomena of nature can only be achieved when one takes into account the spirit of man. And only then can one understand man.

Ron says,

It was only when I began to treat man as a spiritual being who was not really dependent upon the body or the flesh that I made any progress at all.

Man is a spiritual being. He is not a piece of flesh. And when we begin to handle man on the basis that he is a spirit of infinite capability, and when we try to improve that capability, we win. And we win very, very profitably and very easily.

ON AUTOMATIC

What about psychics? Are they some kind of supermen? A higher being?

Interestingly enough, these people are actually not very causative at all.² They do not understand what they do, and it is largely out of their control. It's on automatic.

As they don't understand it, and can't control it, they do not take responsibility for it. Geller claims his phenomena are produced by "extraterrestrial beings." Jordan, the table-tilter, credits the spirits of the dead.

D. D. Home, and other 19th century mediums, took no responsibility for what they did. It was all done "through" them by the spirits.

How do these people get the way they are?

Ron says,

2. with one notable exception: See *OTs in Action*, page 9.

OTs in Action (from page 10)

doors to the spirit/matter hypothesis. And I expect then that Ron's writings will become standard texts there, as they are already for us.

ADVANCE!: What are your biggest wins as an OT?

INGO: Gosh, there have been so many! For one thing, right now I think a lot of the future, and that I can exist in it as well as in present time. Another thing is that, while life is tough, I am tougher still. And it's also a win that I am interested in so many things — too many, in fact! All these are wins.

As I said earlier, it's my reality now that being OT is to make things go right, to grow, to create saner surroundings, or at least to try for that and to get audited and persist until you finally succeed. I can't see OT as being a superstar thing — it's just being good and excellent at what you want to do, and hard as nails in getting it done.

ADVANCE!: What do you feel is the role of an OT in society?

INGO: It depends on what area of the society the OT wants to get involved in. Different social areas and strata demand different understandings and knowledge.

Man is basically good but an aberrated operating thetan can exist.

Say this character is very very aberrated. By the accidental combination of being outside and finding out that he could move MEST, that he could make sound, that he could do things, he's liable to do most anything.

He is in actual fact operating automatically. He can do these things, but without knowing how he does them. And he's not able to control them.

Around some people things move. This is poltergeist phenomena, which is simply the spiritual movement of things.

It's very automatic. The being takes on this ability and loses it. He is really not an operating thetan at all. He's just a released OT.

These beings can be upsetting because they're doing what they're doing without knowing what they're doing.

An operating thetan is a thetan exterior who can have but doesn't have to have a body in order to control or operate thought, life, matter, energy, space and time.

Our definition of an operating thetan is that of a Clear Operating Thetan. He would know he was cause, he would know what he was doing, he would know why he was doing it and he would be able to do it.

TRUE CAUSE

On the Advanced Courses, the road lies open for anyone to regain — and understand — his true power and ability as a thetan.

An OT can use his abilities knowingly and responsibly — not to overwhelm people by suddenly tilting tables or bending spoons, but to aid survival on all dynamics.

The spirit can be cause over MEST. And by confronting and handling the MEST of the Reactive Mind on the Advanced Courses, a being can remove the blocks to his true potential.

True causativeness, over mind and matter lies waiting for anyone, on the Advanced Courses.

Yet there is one thing all OTs working in the society should have in common: Find and validate the upstat wherever you find it, and ignore the downstat. Too many waste time fighting the downstat, trying to change that. You can make miles and miles in seconds by supporting the upstat in any society or social level. I think right now that is a prime role for the OT who wants to work in the field. ADVANCE!: Do you have any advice for Scientologists who are not yet Clear and OT?

INGO: Yes. Get trained too. The Dianetics Course and the Briefing Course are so very, very important, not just for auditors, but for understanding and comprehension of the world around us. It is a reactive world around us, and it is through training that you will surmount that reactive world the fastest.

And, too, since one must confront the world, don't be fearful of going back into session to get repaired for all the knocking about you might get.

I am so glad you are all here, ever so glad. It seems less lonely in theta space now that there are so many people on the Bridge. As it is said: the Force is improving . . .

In September 1978, Hubbard had another pulmonary embolism, a blood clot in the artery to the lungs.

Kima Douglas fed him a huge dose of his pills. He drifted into a coma. David Mayo was sent to audit him.

The procedures developed by Mayo are known as New Era Dianetics for Operating Thetans — NOTs.

This only had to do with auditing demons that were attached to your body and getting them to leave.

On 19 September 1978 the original OT levels that had exteriorization drills and placing a thought in other people, were replaced with NOTs. Then all of the OT levels only deal with demons and nothing else.

In the summer 1980 – I, Mike McClaughry, was the Security Officer at the United States Guardian's Office in Los Angeles. Major Bruce Rothwell was attempting to gain approval to go on the Scientology upper levels. I had several interviews with Rothwell.

Rothwell told me that the United States intelligence community considered Scientology to be a national security threat, because people who could exteriorize might spy on the government and military. Rothwell also said that the experiments at SRI wherein Ingo Swann affected a magnetic field with his thought, was alarming. Rothwell said that the guidance system for a nuclear missile is a magnetic field. Such people might affect the path of a nuclear missile.

Be Quiet. I'm tuning into the waves right now...

* * *

Ultrasound is vibration of the air above the upper limit of human hearing.

Voice-EM uses a tone near the upper limit

Voice FM uses a tone near the upper limit.

Ultrasound/voice-FM can be transmitted through the air directly to the brain using a modulated microwave pulse or by **piggybacking an ultrasound message on top of commercial radio or television.**

Radio and TV can carry enough ultrasound messaging to be “heard” by the human brain (though not the ear) to be effective in **conveying hypnosis.** This was proven by the U.S. military forces in the Gulf War.

Ultrasound and voice-FM’s advantage in electronic mind harassment is that it can carry **verbal** hypnosis.

The brain can “hear” and understand this “inaudible voice”, while the ear cannot.

One method for projecting either audible voice or voice-FM over long distances, is the “HyperSonic Sound” system, patented by American Technologies Corporation in San Diego, California.

Altered States Limited is a company in New Zealand that sells tapes which perform “suggestions” (i.e. hypnosis) using the Lowery patent voice-FM method, to hypnotize without the subject being aware.

Here is an advertisement from Altered States Limited:

SILENT SUBLIMINALS

“ **Only your mind can hear. Your ears hear nothing but your mind hears and accepts the powerful suggestions. You can safely play these tapes anywhere – in a car... or even as silent sleep programming. The listener can expect his subconscious mind to accept the suggestions with repeated listening. Examples of Suggestions:**

You have the self-discipline to lose all the weight you want

You are a non-smoker, cigarettes disgust you

Quit smoking. Quit smoking. Quit smoking

You feel good about yourself

**You detach from worldly pressures and experience
an inner calm**

You accept other people as they are

**You are at peace with yourself, the world and
everyone in it**

You can accomplish whatever you set out to do

Be ultra-successful and become wealthy

* * *

Non-Lethal Weapons are devices for beaming various kinds of energy at humans to incapacitate them, or to control or affect their behavior.

ELF (extra low frequency) waves was their new hope for controlling men's minds.

From 1980-83 Eldon Byrd ran the Marine Corps Nonlethal Electromagnetic Weapons project.

Article – *Wonder Weapons*, US News and World Report 55

ing to budget documents, the lab intends to spend more than \$110 million over the next six years "to exploit less-than-lethal biological effects of electromagnetic radiation for Air Force security, peacekeeping, and war-fighting operations."

Low-frequency sleep

From 1980 to 1983, a man named Eldon Byrd ran the Marine Corps Nonlethal Electromagnetic Weapons project. He conducted most of his research at the Armed Forces Radiobiology Research Institute in Bethesda, Md. "We were looking at electrical activity in the brain and how to influence it," he says. Byrd, a spe-

cialist in medical engineering and bioeffects, funded small research projects, including a paper on vortex weapons by Obolensky. He conducted experiments on animals—and even on himself—to see if brain waves would move into sync with waves impinging on them from the outside. (He found that they would, but the effect was short lived.)

By using very low frequency electromagnetic radiation—the waves way below radio frequencies on the electromagnetic spectrum—he found he could induce the brain to release behavior-regulating chemicals. "We could put animals into a stupor," he says, by hitting them with

U.S. NEWS & WORLD REPORT, JULY 7, 1997 45

Byrd says he was told his work would be unclassified, "unless it works." Because it worked, he suspects that the program "went black." Other scientists tell similar tales of research on electromagnetic radiation turning top secret once successful results were achieved. There are clues that such work is continuing. In 1995, the annual meeting of four-star U.S. Air Force generals—called CORONA—reviewed more than 1,000 potential projects. One

was called "Put the Enemy to Sleep/Keep the Enemy From Sleeping." It called for exploring "acoustics," "microwaves," and "brain-wave manipulation" to alter sleep patterns. It was one of only three projects approved for initial investigation.

Direct contact

As the military continues its search for nonlethal weapons, one device that works on contact has already hit the streets. It is called the "Pulse Wave Myotron." A sales video shows it in action. A big, thuggish-looking "criminal" approaches a well-dressed woman. As he tries to choke her, she touches him with a white device about the size of a pack of cigarettes. He falls to the floor in a fetal position, seemingly paralyzed but with eyes open, and he does not recover for minutes.

"Contact with the Myotron," says the narrator, "feels like millions of tiny needles are sent racing through the body. This is a result of scrambling the signals from the motor cortex region of the brain," he says. "It is horrible," says William Gunby, CEO of the company that developed the Myotron. "It is no toy." The Myotron overrides voluntary—but not involuntary—muscle movements, so the victim's vital functions are maintained. Sales are targeted at women, but law enforcement officers and agencies—including the Arizona state police and bailiffs with the New York Supreme Court—have purchased the device, Gunby says. A special model built for law enforcement, called the Black Widow, is being tested by the FBI, he says. "I hope they don't order a lot soon," he adds. "The Russian government just ordered 100,000 of them, and I need to replenish my stock."

The U.S. military also has shown interest in the Myotron. "About the time of the gulf war, I got calls from people in the military," recalls Gunby. "They asked me about bonding the Myotron's pulse wave to a laser beam so that everyone in the path of the laser would collapse." While it could not be done, Gunby says, he nonetheless was warned to keep quiet. "I was told that these calls were totally confidential," he says, "and that they would completely deny it if I ever mentioned it."

Some say such secrecy is necessary in new-weapons development. But others think it is a mistake. "Because the pro-

biological consequences. A heating effect is produced by excitation of water molecules. Army experiments with animals in nonweapons programs show that microwave exposure can lead to memory impairment, cardiac arrest, a "stun" effect, and seizures.

grams are secret, the sponsorship is low level, and the technology is unconventional," says William Arkin of Human Rights Watch Arms Project, "the military has not done any of the things to determine if the money is being well spent or the programs are a good idea." It should not be long before the evidence is in. ■

They are aptly named WONDER WEAPONS

Army Mobility Equipment Command (Fort Belvoir, VA, United States)

Published: June 1, 1980

NASA Subject Category: Life Sciences

Abstract:

A decoy and deception concept presently being considered is to remotely create the perception of noise in the heads of personnel by exposing them to low power, pulsed microwaves. When people are illuminated with properly modulated low power microwaves the sensation is reported as a buzzing, clicking, or hissing which seems to originate within or just behind the head. **By proper choice of pulse characteristics, intelligible speech may be created.**

Kind of like having an evil gnome in your head that says things to you.

Today, **the ability to remotely transmit microwave voices inside a target's head** is known inside the Pentagon as Synthetic Telepathy. According to Dr. Robert Becker, "Synthetic Telepathy has applications in **covert operations designed to drive a target crazy with voices or deliver undetected instructions** to a programmed assassin."

Silent (converted-to-voice FM) **hypnosis can be transmitted** using a voice frequency modulator to generate the "voice." It is a steady tone, near the high end of hearing range (15,000 Hz), plus a hypnotist's voice, varying from 300 – 4,000 Hz. These two signals are frequency modulated. **The output now appears as a steady tone, like tinnitus, but with hypnosis embedded.** The FM-voice controls the timing of the transmitter's pulse.

The mind-altering mechanism is based on a subliminal carrier technology: the Silent Sound Spread Spectrum (SSSS), sometimes called "S-quad" or "Squad". It was developed by Dr Oliver Lowery of Norcross, Georgia, and is described in US Patent #5,159,703, "Silent Subliminal Presentation System", dated October 27, 1992.

The abstract for the patent reads –

A silent communications system in which nonaural carriers, in the very low or very high audio-frequency range or in the adjacent ultrasonic frequency spectrum are amplitude- or frequency-modulated with the desired intelligence and propagated

acoustically or vibrationally, for inducement into the brain.

The modulated carriers may be transmitted directly in real time or may be conveniently recorded and stored on mechanical, magnetic, or optical media for delayed or repeated transmission to the listener.

According to literature by Silent Sounds, Inc., it is now possible, using supercomputers, **to analyze human emotional EEG patterns and replicate them, then store these “emotion signature clusters” on another computer and, at will, “silently induce and change the emotional state in a human being”.**

The system was used throughout Operation Desert Storm (Iraq) quite successfully.

Dr Michael Persinger is a Professor of Psychology and Neuroscience at Laurentian University, Ontario, Canada. His work and findings indicate that strong electromagnetic fields can and will affect a person's brain.

“ Temporal lobe stimulation can evoke the feeling of a presence, disorientation, and perceptual irregularities. It can activate images stored in the subject's memory, including nightmares and monsters that are normally suppressed.

Brain entrainment: This involves moods and sleep states. The low frequency electrical brain rhythms are characteristics of various moods and states of sleep. These moods and sleep states can be generated or at least encouraged using brain entrainment devices.

Brain entrainment signals cannot carry voice, which is a much higher frequency range.

Brain entrainment can be used to set up a target to make him/her more susceptible to hypnosis. ⁵⁶

In May 1993 the Brian Kohn Project began. The abstract read – ⁶⁰

In this research program, we plan to investigate a revolutionary new form of communication based on the microwave auditory effect. The study found that voice communications, via the microwave auditory effect, are highly feasible.

* * *

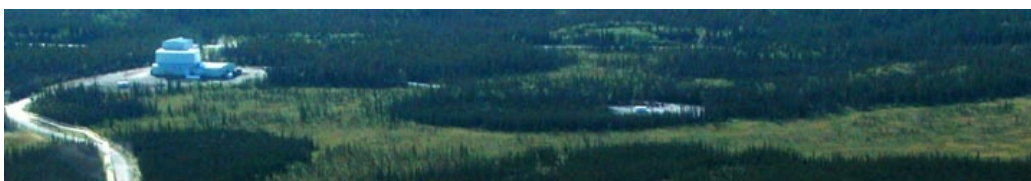

1993 – High-frequency Active Auroral Research Program (HAARP)

HAARP zaps the upper atmosphere with a focused and steerable electromagnetic beam. It is an ionospheric heater. The ionosphere is the electrically charged sphere surrounding Earth's upper atmosphere.

HAARP is a series of connected antennas that send out signals instead of receiving. It is a superpowerful radio-wave beaming technology that lifts areas of the ionosphere by focusing a beam and heating those areas.

Remember Eldon Byrd's 1980-1983 project here – which had already proven that ELF could be used to induce sleep and behavior altering chemical releases from the brain.

HAARP in Alaska

Twelve patents are the backbone of the HAARP project.

There are patents that are a wireless system for sending electrical power. They could beam electrical power, without wires, from a powerhouse to the consumer. This was technology developed by Nikola Tesla. It could be used to provide free electricity to operate electric cars and provide free electricity to every home. Rather than doing that, they use it for military purposes.

HAARP has military uses. Electromagnetic fields can be used as a biological warfare weapon. They can be used to disrupt mental processes. Further, it has the ability to spray large areas of Earth with electromagnetic waves. The signal is transmitted from HAARP to a satellite, the satellite focuses the beam on targeted areas of earth.

U.S. Air Force documents revealed that a system has been developed for manipulating and disrupting human mental processes through pulsed radio-frequency radiation over large geographical areas.

Zbigniew Brzezinski, National Security Advisor to the President, wrote about the use of electromagnetic technology. A system could be developed that would seriously impair the brain performance of very large populations in selected regions. The document even tells the frequency ranges where these effects could occur – the same ranges which HAARP is capable of broadcasting.

A U.S. Air Force document states:

The potential applications of artificial electromagnetic fields are wide-ranging. The electromagnetic systems can produce severe physiological disruption or perception distortion

physiological disruption or perception distortion.
The ability of individuals to function could be degraded to such a point that they would be combat-ineffective. Electromagnetic systems can provide **coverage over large areas with a single system.** ⁵⁷

This is just shameful.

But maybe on the brighter side – as of June 2013, HAARP was sitting “closed”.

[Alaska's controversial HAARP facility closed — will it come back online?](#)

Ben Anderson

Alaska Dispatch

July 22, 2013

Alaska's High-Frequency Active Auroral Research Program (HAARP) has drawn its fair share of conspiracy theories over the years, as it sits in Gakona, an array of antennas intended to heat the Earth's ionosphere and study the effects. Fringe thinkers have

tenuously linked HAARP to everything from the 2011 Japanese Earthquake to mind control and hurricanes.

But if there are no major earthquakes or bizarre global weather events in the coming weeks or months, the folks at HAARP may have some explaining to do — the facility has apparently been shuttered since June, the power turned off as HAARP waits for a hoped-for change in contractors to operate the facility.

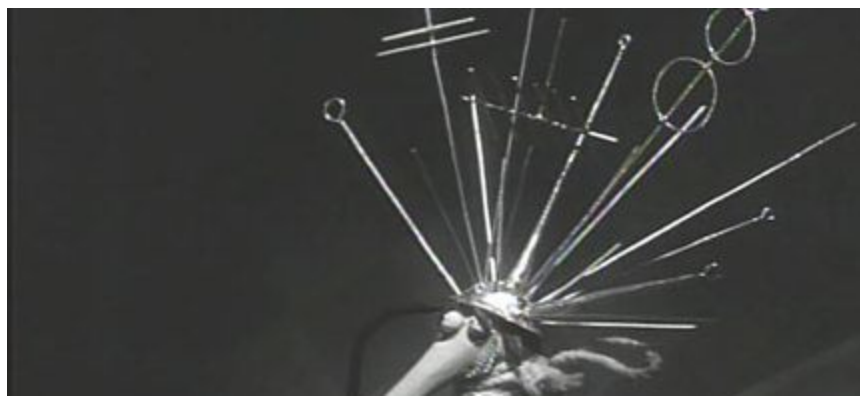

HAARP is a government-owned facility, primarily overseen by the U.S. Air Force, though the Defense Advanced Research Projects Agency (DARPA) funds a number of grant projects there. The project was previously managed by the Air Force Research Laboratory at Hanscom Air Force Base in Massachusetts, but is currently overseen by a research unit at Kirtland Air Force Base in Albuquerque, N.M. after the Hanscom unit was moved in 2011.

* * *

Intel Corporation was awarded a five-year contract in 1994, to develop a chip that would be linked to a global computer, using the excuse that all financial transactions had to be registered at the new world central bank. The computer would know everything there is to know about us at all times and would be able to send messages the other way, from the computer to us, feeding us messages and programming our consciousnesses. Robots would be exactly the word.⁵⁸

Dr. Jose Delgado said that the day would come when brain control could be turned over to non-human operators, by establishing two-way communication between the implanted brain and a computer.

Slavemaster experiments – “this is not a good look for me.”

* * *

Nature Magazine – January 22, 1998 –

“Neuroscience is being increasingly recognized as posing a potential threat to human rights. This was one of the conclusions to emerge from the annual meeting of the French national bioethics committee held last week in Paris.

Denis Le Bihan, a researcher at the French Atomic Energy Commission, told the meeting that the use of imaging techniques has reached the stage where “we can almost read people’s thoughts”.

Advances in cerebral imaging make the scope for invasion of privacy immense. Although the equipment needed is highly specialized, it will become commonplace and capable of being used at a distance. That will open the way for abuses such as invasion of personal liberty, control of behaviour and brainwashing.

It constitutes “a serious risk to society”.

* * *

NEXUS magazine October/November 1998 –

Military Use of Mind Control Weapons

For years... the United States Department of Defense has been engaged in research and development of

has been engaged in research and development of ultra-sophisticated mind-altering technology.

The March 23, 1991 newsbrief ...describes a US Psychological Operations (PsyOps) tactic directed against Iraqi troops in Kuwait during Operation Desert Storm
...utilizing 'silent sound' techniques.

Subliminally, a much more powerful technology was at work: a sophisticated electronic system to 'speak' directly to the mind of the listener, to alter and entrain his brainwaves, ...and **artificially implant negative emotional states- feelings of fear, anxiety, despair and hopelessness**. This subliminal system doesn't just tell a person to feel an emotion, **it makes them feel it**; it implants that emotion in their minds.

The mind-altering mechanism is based on a subliminal carrier technology:
the Silent Sound Spread Spectrum (SSSS),
sometimes called "S-squad" or "Squad".

By using these computer-enhanced EEGs, scientists can identify and isolate the brain's low-amplitude "emotion signature clusters", synthesise them and store them on another computer. In other words, by studying the subtle characteristic brainwave patterns that occur when a subject experiences a particular emotion, scientists have been able to identify the concomitant brainwave pattern and can now duplicate it.

"These clusters are then placed on the Silent Sound carrier frequencies and **will silently trigger the occurrence of the same basic emotion in another human being!**"

Nothing like being bombarded with an electrical storm to start your day off right.

May 1999 Albuquerque Journal –

“ Governor Gary Johnson has hopes that rapidly advancing computer technology someday could help solve the problem of New Mexico’s overcrowded prisons. Much to the dismay of inmate lawyers, Johnson at a private meeting in May 1999 raised the possibility that a futuristic form of incarceration could include implanting microchips in convicted felons.

Cubra told the legislative committee Aug. 18 in Albuquerque, “What the governor literally said ... was, he took his index finger and thumb and held them about a half an inch apart and he said ‘We are this close to the time when we will have microchips available’ and then he took his left hand, took it to his temple and said ‘and we can insert the microchips into people’s brains and control their behavior that way’ ” 59

Electronic implants can receive instructions from radio signals, passing them to the brain, and can be used to read brain activity at a

distance.

.

Journal of Neuroscience, September 1999 issue –

A Cat's Eye Marvel – by Leander Kahney

In a dramatic demonstration of mind reading, neuroscientists have created videos of what a cat sees by using electrodes implanted in the animal's brain. Garrett Stanley of Harvard, and Fei Li and Yang Dan of the University of California, Berkeley, were able to reconstruct in startling detail scenes flashed before a cat's eyes.

The reconstructed scenes clearly demonstrate the scientist's ability to decode the language of the cat's visual system. By understanding the language of the brain, scientists will be able to create devices that talk to it.

NEXUS Magazine, October-November 1999 –

Aerial Mind-Control – The Threat to Civil Liberties by Judy Wall

USAF Commando Solo: Aerial Mind Control Broadcasts

The United States Air Force uses aerial mind-control broadcasts against civilian population as well as enemy troops. Some of these actions against civilians are done with the intent of influencing public opinion and the outcome of elections.

In a previous article, we examined mind-control technology, especially that utilizing Silent Sound, in which radio-frequency broadcasts carry subliminal patterns that entrain the listener's brainwaves into a

pre-selected emotional state. This technology was used during Operation Desert Storm in 1991, as part of the US Psychological Operations (PsyOps) directed against Iraqi troops.

To the Desert Storm offensive we can now add several other incidents. Alex Horvat, editor of The Probe, calls to our attention the 1998 video, Exotic Weapons of Mass Control, produced by Bob Fletcher.

The excerpt played on Fletcher's video is from TLC (The Learning Channel) and clearly states that Commando Solo was used in Haiti for what was called Operation Uphold Democracy. As the general populace was violently opposed to Aristide and most in favor of his ouster, it took nearly a year of this clandestine counter-programming to get them to change their minds.

Instead of butchering a population physically, we can now manipulate them mentally, virtually enslaving their thoughts with a criss-cross pattern of flights by an EC-130 (which is just a C-130 heavily laden with electronic hardware.)

We were not at war with the citizens of Haiti, yet the U.S. Government directed military weapons against this friendly civilian population. The U.S. Government sanctioned the "rigging" of the Haitian election by mental control of the people, programming them to cast their votes for the Americans' favored candidate. And they had the nerve to call it "Operation Uphold Democracy".

The rationale is always the same: "to make the world safe for democracy." Yet what is democracy if not freedom? Freedom to think your own thoughts; freedom to express your own opinions; freedom to

vote for the candidate of your own choice.

Fletcher's video also mentions that the same technology was used against the Bosnia population for a week to influence their election. This was probably done during Operation Joint Guard in 1995.

The questions arise: If they have used mind-control broadcasts against foreign civilian populations to influence elections, will they use them against American citizens, or have they already?

Just what is this EC-130E Commando Solo? The United States Air Force has helpfully published a fact sheet... cost is more than 100 million each and there are eight in the inventory. Its primary function is "Psychological operations broadcasts".

According to the fact sheet:

"Commando Solo conducts psychological operations and civil affairs broadcast missions in the standard AM, FM, HF, TV and military communications bands. Missions are flown at maximum altitudes possible to ensure optimum propagation patterns. A typical mission consists of a single ship orbit which is offset from the desired target audience. The targets may be either military or civilian personnel. "

Air National Guard EC-130 aircraft flown by the 193rd Special Operations Group were deployed to both Saudi Arabia and Turkey in support of Desert Storm.

Volant Solo, as the mission is now known, was instrumental in the success of coordinated psychological operations in Operation Just Cause. Operation Just Cause? this is another propaganda name, applied to the U.S. invasion of Panama to take out that country's leader, General Noreiga, the CIA's erstwhile partner in drug smuggling

erstwhile partner in drug smuggling.

Military Psyops Against Civilians

In a phone call to the USAF Special Operations Command Public Affairs Office, I questioned the legitimacy of using these subliminal broadcasts against civilian populations. I was told that it was all perfectly legal, having been approved by the U.S. Congress! It may be okay by Congress, but I sincerely doubt that it would be approved by the recipient populations.

That conversation also elicited more information concerning the Commando Solo units. For instance, the Air National Guard of the individual states in the U.S. can also operate Commando Solo aircraft, should the Governor of a state request assistance. That means the PsyOps mind-control technology can be directed against U.S. citizens.

The Commando Solo aircraft have participated in the following missions:

- Operation Urgent Fury (Grenada, Oct-Nov 1983, Jan-Jun 1985)
- Operation Just Cause (Panama, late December 1989)
- Operation Desert Shield (Kuwait, Iraq, from August 1990)
- Operation Desert Storm (Saudi Arabia, Turkey, Iraq, 1991)
- Operation Uphold Democracy (Haiti, 1994-1995)
- Operation Joint Guard (Part of a UN operation in Bosnia-Herzegovina, 1995)
- Operation Desert Thunder (part of a UN operation in Iraq)
- Operation Desert Fox (Iraq, 2 to 3 days in December 1998)

I searched through my copy of Jane's Radar and Electronic Warfare Systems 1993/94.

...the book was informative as to the numerous types of electronic offence and defence systems available.

These include stationary and mobile land units (many housed in large trucks), shipboard and airborne models as well as space-based technology. If the military is spending US \$100 million per airborne unit I think it is safe to assume that they have tried out mind control equipment with less expensive, roving land units (trucks), but use the airplanes to cover wider areas and hard-to-reach locations of the world.

And I might add, we can assume that they have tried out the efficacy of this mind-control technology. Even the US military would not waste \$800 million on something unless it has been proven to work, and work effectively, even under the adverse situation of military combat.

The initial research into mind control in the USA was conducted under the auspices of the CIA. The flagrant abuse of human rights in experimenting on unsuspecting persons was based on the supposition that the veracity of experiments would be compromised if a subject knew that he was participating in an experiment. In the case of mind-control technology, this supposition might very well be true. But that does not justify its use...

Manipulating Mind And Body By Satellite

The next logical step in mind control would be to incorporate this technology into satellite communications. Since other countries are known to have similar capabilities, there could occur a situation in which electronic mind control warfare is

situation in which electronic mind control warfare is waged against a civilian population, receiving conflicting mental manipulation from both sides. What would be the mental state of individuals so targetted? Would it cause a rise in mental aberrations and “schizophrenia”? And what are the limits of mind manipulations? Can people be forced to commit suicide? Can physical ailments or psychosomatic illnesses be induced?

It is not a far step from manipulating a person’s emotional state to influencing bodily functions. Indeed, much of the literature on documenting microwave effects on biological systems deals with precisely this phenomenon. In fact, studies of the physical effects of microwave exposure (including radio frequencies) generally preceeded studies of mental effects.

A meeting sponsored by Defense & Foreign Affairs and the International Strategic Studies Association was held in Washington DC in 1983. High-level officials from many countries met for this conference. They discussed psychological strategies related to government and policymaking. A summary of the agenda reads:

“The group will be discussing the essence of future policymaking, for it must be increasingly clear to all that the most effective tool of government and strategy is the mind. If it’s any consolation to the weapons-oriented among defense policymakers, the new technologies of communications – satellites, television, radio, and mind-control beams – are ‘systems’ which are more tangible than the more philosophically based psychological strategies and operations. “

“But we should make no mistake; it will be the ‘psychologically based’ systems which determine

the world's fate in coming years: the condition of the minds of populations and leaders. And we should not ignore the fact that the USSR [this was in 1983] is working on electronic systems to 'beam' messages directly into the brain. What good, then, are conventional systems if these types of weapons are not countered?"

Mind Control Against 'Potential' Enemies

On July 21, 1994, **the US Department of Defense proposed that non-lethal weapons be used not only against declared enemies, but against anyone engaged in activities that the DOD opposed. That could include almost anybody and anything.** Note that the mind-control technology is classified under non-lethal weapons.

A 1998 news item states that US Air Force General John Jumper "predicts that the military will have the tools to make potential enemies see, hear, and believe things that do not exist" and that "The same idea was contained in a 15-volume study by the USAF Scientific Advisory Board, issued in 1996, on how to maintain US air and space superiority on the battlefields of the 21st century".

It seems that, in military parlance, a "prediction" means: "Don't be surprised when you find out we've already got this, but it's classified and we can't admit to it just yet."

Notice that General Jumper predicts that mind control technology will be used against potential enemies. The military and government agencies may apply this term to any group or individual they perceive as a threat to their own interests. **Potential enemies may be counter-culture individuals, those of opposing political viewpoints, economic or**

financial competitors, biological undesirables, etc. It is part of the military agenda to identify potential threats so as to be prepared to meet them.

Experience has shown that the US Government (the CIA and FBI, for example) has moved against these people or groups, slandering, harassing, even killing them, without adequate cause or legal sanction.

A weapon that can be used in secret lends itself to abuse by unethical individuals in positions of power. The military and secret services have shown themselves often to be lacking in ethical constraints. After all, the job of the military is war; it is killing people; and so, just how this is accomplished may be considered irrelevant.

Of course, it can be argued that it is far more humane to brainwash a person via mind control technology than it is to torture or kill them. Others vehemently deny this. They'd rather be dead than a mental slave to Big Brother!

The HAARP facility could be used to broadcast global mind-control messages.

A Worldwide Mind Control Mission

To return to the USAF Fact Sheet, it concludes: "In 1990 the EC-130 joined the newly formed Air Force Special Operations Command and has since been designated Commando Solo, with no change in mission. This one of a kind aircraft is consistently improving its capabilities. The next few years should see continued enhancements to the EC-130 and its worldwide mission."

.
Government to Fund Synthetic Telepathy Research by Laura Spadanuta 08/19/2008 –

“

The University of California has received a \$4 million grant to study synthetic telepathy.

The brain-computer interface would use a noninvasive brain imaging technology like electroencephalography to let people communicate thoughts to each other.

For example, a soldier would “think” a message to be transmitted and a computer-based speech recognition system would decode the EEG signals. The decoded thoughts, in essence translated brain waves, are transmitted using a system that points in

waves, are transmitted using a system that points in the direction of the intended target.

* * *

The Church of Scientology assists in covering up the use of cruel mind control weapons.

On October 26, 2011 a Scientology spokesperson issued the following statement to RadarOnline.com:

“ **In short, the petition to investigate Scientology should be taken as seriously as the petition to “form a presidential commission to investigate the covert use of mind control technologies on American citizens.”**

Could the spokesperson have made it any more obvious what camp Scientology is in?

* * *

In 2013 President Obama announced funding for a research project into brain mapping.

In simple terms, they are trying to perfect a machine to read people's thoughts – so they can find out who has thoughts against the New World Order. The machine will also be able to send non-verbal thoughts to people – so they can covertly manipulate their ideas.

A very recent New York Times article –

President Obama on Tuesday will announce a broad new research initiative, starting with \$100 million in
“ **2014, to invent and refine new technologies to understand the human brain, senior administration officials said Monday.**

...it is directed at a problem that has seemed

...is directed at a problem that has seemed insoluble up to now: the recording and mapping of brain circuits in action in an effort to “show how millions of brain cells interact.”

Three government agencies will be involved: the National Institutes of Health, the Defense Advanced Research Projects Agency (DARPA) and the National Science Foundation.

At the DARPA website they explain their involvement...

To help keep the country safe...

New tools are needed to measure and analyze electrical signals and the biomolecular dynamics underpinning brain function.

DARPA’s planned investment includes new programs to address ...ongoing efforts designed to advance fundamental understanding of the brain’s dynamics... and analyze large data sets (Detection and Computational Analysis of Psychological Signals).

**Those are some fancy words to say
they want to read people’s thoughts.**

.
This is all part of the whole **Synthetic Telepathy** camp, excerpts from that article –

Another planned new program is Silent Talk, to develop the capability to communicate without speaking by recognizing the neural signals for specific words. The brain generates word-specific signals prior to sending electrical impulses to the vocal chords, according to Darpa.

The plan is to recognize these “intended speech”

signals using electroencephalography (EEG) and translate them into words, allowing covert communications. Initially Darpa wants to identify EEG patterns unique to 100 words commonly used by warfighters.

An article on the brain mapping project appeared in the March 2013 Esquire magazine –

Prison Planet by Luke Dittrich

Luke Dittrich highlighted the president's plan to map the mind. In his research, Dittrich uncovered a paper by a few of the scientists involved in the BRAIN Initiative that reveals a more sinister aspect of the government's quest to understand the mind.

The paper entitled [The Brain Activity Map Project and the Challenge of Functional Connectomics](#) (PDF [here](#)) — includes predictions of the development of “techniques for wireless, noninvasive readout of the activity of neuronal populations.” In simpler terms, this research would allow those in control of the discoveries gleaned from this program to wirelessly access and control the brains of target populations.

They want to design a machine to read people's thoughts and to send thoughts to people.

send thoughts to people.

Winning The War

The British nobility and the Popes want a **two-class society** where Kings and Priests rule the commoners.

They want to form and head a World Government that directly rules over every individual in the world.

The slavemasters have engaged in slave-trafficking, drug-trafficking, instigating and financing needless wars, self-serving banking practices and self-serving business practices. They have caused death and suffering to hundreds of millions of people all around the world.

The people are very correct in not wanting to live under the boot and say-so of these sociopaths.

Thus came about the War for the Hearts and Minds of Men.

The important thing to know about the War for the Hearts and Minds of Men is this –

if you treat people well, help them with what they need to live, they will love you for that.

That is how to win the Hearts and Minds of Men.

But since the slavemasters are sociopaths, they don't treat us well, instead they make war on the rest of us.

The War for the Minds of Men – is a war. And their means used to fight it are **weapons**.

Propaganda and psychotronics are weapons for covertly manipulating people.

The amount of covert manipulation you are subjected to in your daily living is amazing.

You sit down to watch a movie, to watch a television show, listen to music, read a book, or to play a video game, and you think you are simply engaging in some entertainment. No, you are under attack, subjected to a barrage of implanted ideas, to modify your behavior and try to control what you feel, think, and do.

You can give in to their behavior modification or you can remain you.

The war is won by **You being You**.

Every method of attempted mind control is dependent on your cooperation.

If you don't cooperate, every method of attempted mind control fails.

The Genuine Article

In the movie *Leap of Faith*, Steve Martin plays the character Jonas. Jonas is a con man running a religious show wherein they do spiritual healings, which appear that way to the audience but they are actually fake. Boyd is another character in the movie who was a kid on crutches. Boyd discarded his crutches at the religious show, but not due to anything done by Jonas. After the show is over, Jonas and Boyd then have a private conversation.

“ (Jonas) Look, I run a show here. It's a lot of smoke and noise and it's strictly for the suckers. I've been pulling one kinda scam or another since I was your age, and if there's one thing I know, it's how to spot the *genuine article*. Because that's what you gotta watch out for. Not the cops. You can always get around the cops. But the one thing you can never ever get around is the genuine article – and you kid, are the genuine article.

(Boyd) Are you saying you think you're a fake?

(Jonas) I know I'm a fake.

(Boyd) Well, what difference does it make if you get the job done?

(Jonas) Kid, it makes all the difference in the world.

Nothing is more terrifying to the slavemasters nor more bitterly fought by them, than...

The Genuine Article

They are the slavemaster's nemesis.

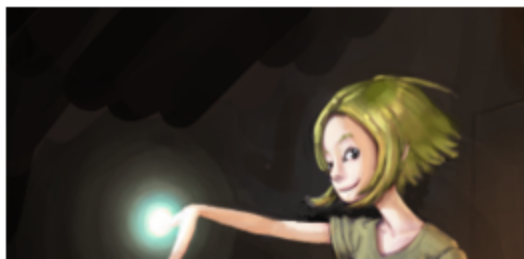

**Hundreds of years of slavemaster work to build
their smoke and mirror show...**

can be quickly destroyed by the appearance of the genuine article...

You

* * *

The following was written by my wife, Virginia McClaughry and Ron Liander.

Control. Many seek it although they know not why. Throughout the last two hundred years especially, this “seeking” has resulted in a desert of obsession in which one cannot find water. The harder they have tried, the more desert they have created and the more they thirst.

‘Noise’ of all kinds have poured forth in a deluge from the thirsty, hoping beyond hope that this time –

THIS TIME – they will *finally* be able to drink from the skull of another.

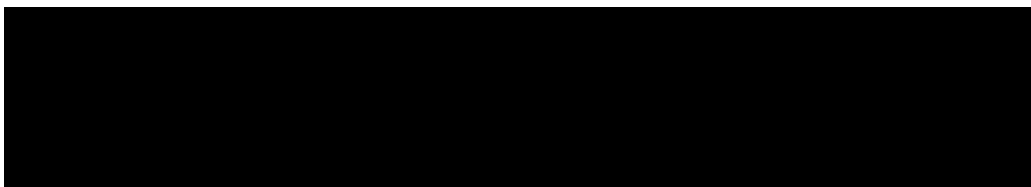

What they don’t understand is that it is the SILENCE that is their unbeatable ‘foe’.

That is where the power is.

The power they seek , they can never *hear*. They can never *record*. They can never *trace*.

For how do you record a *whom* that needs not say anything at all?

Where YOU reign, there is silence and *so much more*.

CONDEMNING CURRENT ERRORS

Encyclical of Pope Pius IX promulgated on December 8, 1864.

To Our Venerable Brethren, all Patriarchs, Primates, Archbishops, and Bishops having favor and Communion of the Holy See.

Venerable Brethren, Health and Apostolic Benediction.

With how great care and pastoral vigilance the Roman Pontiffs, our predecessors, fulfilling the duty and office committed to them by the Lord Christ Himself in the person of most Blessed Peter, Prince of the Apostles, of feeding the lambs and the sheep, have never ceased sedulously to nourish the Lord's whole flock with words of faith and with salutary doctrine, and to guard it from poisoned pastures, is thoroughly known to all, and especially to you, Venerable Brethren. And truly the same, Our Predecessors, asserters of justice, being especially anxious for the salvation of souls, had nothing ever more at heart than by their most wise Letters and Constitutions to unveil and condemn all those heresies and errors which, being adverse to our Divine Faith, to the doctrine of the Catholic Church, to purity of morals, and to the eternal salvation of men, have frequently excited violent tempests, and have miserably afflicted both Church and State. For which cause the same Our Predecessors, have, with Apostolic fortitude, constantly resisted the nefarious enterprises of wicked men, who, like raging waves of the sea foaming out their own confusion, and promising liberty whereas they are the slaves of corruption, have striven by their deceptive opinions and most pernicious writings to raze the foundations of the Catholic religion and of civil society, to remove from among men all virtue and justice, to deprave persons, and especially inexperienced youth, to lead it into the snares of error, and at length to tear it from the bosom of the Catholic Church.

2. But now, as is well known to you, Venerable Brethren, already, scarcely had we been elevated to this Chair of Peter (by the hidden counsel of Divine Providence, certainly by no merit of our own), when, seeing with the greatest grief of Our soul a truly awful storm excited by so many evil opinions, and (seeing also) the most grievous calamities never sufficiently to be deplored which overspread the Christian people from so many errors, according to the duty of Our Apostolic Ministry, and following the illustrious example of Our Predecessors, We raised Our voice, and in many published Encyclical Letters and Allocutions delivered in Consistory, and other Apostolic Letters, we condemned the chief errors of this most unhappy age, and we excited your admirable episcopal vigilance, and we again and again admonished and exhorted all sons of the Catholic Church, to us most dear, that they should altogether abhor and flee from the contagion of so dire a pestilence. And especially in our first Encyclical Letter written to you on Nov. 9, 1846, and in two Allocutions delivered by us in Consistory, the one on Dec. 9, 1854, and the other on June 9, 1862, we condemned the monstrous portents of opinion which prevail especially in this age, bringing with them the greatest loss of souls and detriment of civil society itself, which are grievously opposed also, not only to the Catholic Church and her salutary doctrine and venerable rights, but also to the eternal natural law engraven by God in all men's hearts, and to right reason; and from which almost all other errors have their origin.

3. But, although we have not omitted often to proscribe and reprobate the chief errors of this kind, yet the cause of the Catholic Church, and the salvation of souls entrusted to us by God, and the welfare of human society itself, altogether demand that we again stir up your pastoral solicitude to exterminate other evil opinions, which spring forth from the said errors as from a fountain. Which false and perverse opinions are on that ground the more to be detested, because they chiefly tend to this, that that salutary influence be impeded and (even) removed, which the Catholic Church, according to the institution and command of her Divine Author, should freely exercise even to the end of the world – not only over private individuals, but over nations, peoples, and their sovereign princes; and (tend also) to take away that mutual fellowship and concord of counsels between Church and State which has ever proved itself propitious and salutary, both for religious and civil interests. 1

For you well know, venerable brethren, that at this time men are found not a few who, applying to civil society the impious and absurd principle of "naturalism," as they call it, dare to teach that "the best constitution of public society and (also) civil progress altogether require that human society be conducted and governed without regard being had to religion any more than if it did not exist; or, at least, without any distinction being made between the true religion and false ones." And, against the doctrine of Scripture, of the Church, and of the Holy Fathers, they do not hesitate to assert that "that is the best condition of civil society, in which no duty is recognized, as attached to the civil power, of restraining by enacted penalties, offenders against the Catholic religion, except so far as public peace may require." From which totally false idea of social government they do not fear to foster that erroneous opinion, most fatal in its effects on the Catholic Church and the salvation of souls, called by Our Predecessor, Gregory XVI, an "insanity;" 2 viz., that "liberty of conscience and worship is each man's personal right, which ought to be legally proclaimed and asserted in every rightly constituted society; and that a right resides in the citizens to an absolute liberty, which should be restrained by no authority whether ecclesiastical or civil, whereby they may be able openly and publicly to manifest and declare any of their ideas whatever, either by word of mouth, by the press, or in any other way." But, while they rashly affirm this, they do not think and consider that they are preaching "liberty of perdition;" 3 and that "if human arguments are always allowed free room for discussion, there will never be wanting men who will dare to resist truth, and to trust in the flowing speech of human wisdom; whereas we know, from the very teaching of our Lord Jesus Christ, how carefully Christian faith and wisdom should avoid this most injurious babbling." 4

4. And, since where religion has been removed from civil society, and the doctrine and authority of divine revelation repudiated, the genuine notion itself of justice and human right is darkened and lost, and the place of true justice and legitimate right is supplied by material force, thence it appears why it is that some, utterly neglecting and disregarding the surest principles of sound reason, dare to proclaim that "the people's will, manifested by what is called public opinion or in some other way, constitutes a supreme law, free from all divine and human control, and that in the political order accomplished facts, from the very circumstance that they are accomplished, have the force of right." But who, does not see and clearly perceive that human society, when set loose from the bonds of religion and true justice, can have, in truth, no other end than the purpose of obtaining and amassing wealth, and that (society under such circumstances) follows no other law in its actions, except the unchastened desire of ministering to its own pleasure and interests? For this reason, men of the kind pursue with bitter hatred the Religious Orders, although these have deserved extremely well of Christendom, civilization and literature, and cry out that the same have no legitimate reason for being permitted to exist; and thus (these evil men) applaud the calumnies of heretics. For, as Pius VI, Our Predecessor, taught most wisely, "the abolition of regulars is injurious to that state in which the Evangelical counsels are openly professed; it is injurious to a method of life praised in the Church as agreeable to Apostolic doctrine; it is injurious to the illustrious founders, themselves, whom we venerate on our altars, who did not establish these societies but by God's inspiration." 5 And (these wretches) also impiously declare that permission should be refused to citizens and to the Church, "whereby they may openly give alms for the sake of Christian charity"; and that the law should be abrogated "whereby on certain fixed days servile works are prohibited because of God's worship," and on the most deceptive pretext that the said permission and law are opposed to the principles of the best public economy. Moreover, not content with removing religion from public society, they wish to banish it also from private families. For, teaching and professing the most fatal error of "Communism and Socialism," they assert that "domestic society or the family derives the whole principle of its existence from the civil law alone; and, consequently, that on civil law alone depend all rights of parents over their children, and especially that of providing for education." By which impious opinions and machinations these most deceitful men chiefly aim at this result, viz., that the salutary teaching and influence of the Catholic Church may be entirely banished from the instruction and education of youth, and that the tender and flexible minds of young men may be infected and depraved by every most pernicious error and vice. For all who have endeavored to throw into confusion things both sacred and secular, and to subvert the right order of society, and to abolish all rights, human and divine, have always (as we above hinted) devoted all their nefarious schemes, devices and efforts, to deceiving and

depraving incautious youth and have placed all their hope in its corruption. For which reason they never cease by every wicked method to assail the clergy, both secular and regular, from whom (as the surest monuments of history conspicuously attest), so many great advantages have abundantly flowed to Christianity, civilization and literature, and to proclaim that "the clergy, as being hostile to the true and beneficial advance of science and civilization, should be removed from the whole charge and duty of instructing and educating youth."

5. Others meanwhile, reviving the wicked and so often condemned inventions of innovators, dare with signal impudence to subject to the will of the civil authority the supreme authority of the Church and of this Apostolic See given to her by Christ Himself, and to deny all those rights of the same Church and See which concern matters of the external order. For they are not ashamed of affirming "that the Church's laws do not bind in conscience unless when they are promulgated by the civil power; that acts and decrees of the Roman Pontiffs, referring to religion and the Church, need the civil power's sanction and approbation, or at least its consent; that the Apostolic Constitutions, 6 whereby secret societies are condemned (whether an oath of secrecy be or be not required in such societies), and whereby their frequenters and favourers are smitten with anathema -- have no force in those regions of the world wherein associations of the kind are tolerated by the civil government; that the excommunication pronounced by the Council of Trent and by Roman Pontiffs against those who assail and usurp the Church's rights and possessions, rests on a confusion between the spiritual and temporal orders, and (is directed) to the pursuit of a purely secular good; that the Church can decree nothing which binds the conscience of the faithful in regard to their use of temporal things; that the Church has no right of restraining by temporal punishments those who violate her laws; that it is conformable to the principles of sacred theology and public law to assert and claim for the civil government a right of property in those goods which are possessed by the Church, by the Religious Orders, and by other pious establishments." Nor do they blush openly and publicly to profess the maxim and principle of heretics from which

arise so many perverse opinions and errors. For they repeat that the "ecclesiastical power is not by divine right distinct from, and independent of, the civil power, and that such distinction and independence cannot be preserved without the civil power's essential rights being assailed and usurped by the Church." Nor can we pass over in silence the audacity of those who, not enduring sound doctrine, contend that "without sin and without any sacrifice of the Catholic profession assent and obedience may be refused to those judgments and decrees of the Apostolic See, whose object is declared to concern the Church's general good and her rights and discipline, so only it does not touch the dogmata of faith and morals." But no one can be found not clearly and distinctly to see and understand how grievously this is opposed to the Catholic dogma of the full power given from God by Christ our Lord Himself to the Roman Pontiff of feeding, ruling and guiding the Universal Church.

6. Amidst, therefore, such great perversion of depraved opinions, we, remembering our Apostolic Office, and very greatly solicitous for our most holy Religion, for sound doctrine and the salvation of souls which is intrusted to us by God, and (solicitous also) for the welfare of human society itself, have thought it right again to raise up our Apostolic voice. Therefore, by our Apostolic authority, we reprobate, proscribe, and condemn all the singular and evil opinions and doctrines severally mentioned in this letter, and will and command that they be thoroughly held by all children of the Catholic Church as reprobated, proscribed and condemned.

7. And besides these things, you know very well, Venerable Brethren, that in these times the haters of truth and justice and most bitter enemies of our religion, deceiving the people and maliciously lying, disseminate sundry and other impious doctrines by means of pestilential books, pamphlets and newspapers dispersed over the whole world. Nor are you ignorant also, that in this our age some men are found who, moved and excited by the spirit of Satan, have reached to that degree of impiety as not to shrink from denying our Ruler and Lord Jesus Christ, and from impugning His Divinity with wicked pertinacity. Here, however, we cannot but extol you, venerable brethren, with great and deserved praise, for not having failed to raise with all zeal your episcopal voice against impiety so great.

8. Therefore, in this our letter, we again most lovingly address you, who, having been called unto a part of our solicitude, are to us, among our grievous distresses, the greatest solace, joy and consolation, because of the admirable religion and piety wherein you excel, and because of that marvellous love, fidelity, and dutifulness, whereby bound as you are to us, and to this Apostolic See in most harmonious affection, you strive strenuously and sedulously to fulfill your most weighty episcopal ministry. For from your signal pastoral zeal we expect that, taking up the sword of the spirit which is the word of God, and strengthened by the grace of our Lord Jesus Christ, you will, with redoubled care, each day more anxiously provide that the faithful entrusted to your charge "abstain from noxious verbiage, which Jesus Christ does not cultivate because it is not His Father's plantation."⁷ Never cease also to inculcate on the said faithful that all true felicity flows abundantly upon man from our august religion and its doctrine and practice, and that happy is the people whose God is their Lord.⁸ Teach that "Kingdoms rest on the foundation of the Catholic Faith;⁹ and that nothing is so deadly, so hastening to a fall, so exposed to all danger, (as that which exists) if, believing this alone to be sufficient for us that we receive free will at our birth, we seek nothing further from the Lord; that is, if forgetting our Creator we abjure his power that we may display our freedom."¹⁰ And again do not fail to teach "that the royal power was given not only for the governance of the world, but most of all for the protection of the Church;"¹¹ and that there is nothing which can be of greater advantage and glory to Princes and Kings than if, as another most wise and courageous Predecessor of ours, St. Felix, instructed the Emperor Zeno, they "permit the Catholic Church to practise her laws, and allow no one to oppose her liberty. For it is certain that this mode of conduct is beneficial to their interests, viz., that where there is question concerning the causes of God, they study, according to His appointment, to subject the royal will to Christ's Priests, not to raise it above theirs."¹²

9. But if always, venerable brethren, now most of all amidst such great calamities both of the Church and of civil society, amidst so great a conspiracy against Catholic interests and this Apostolic See, and so great a mass of errors, it is altogether necessary to approach with confidence the throne of grace, that we may obtain mercy and find grace in timely aid. Wherefore, we have thought it well to excite the piety of all the faithful in order that, together with us and you, they may unceasingly pray and beseech the most merciful Father of light and pity with most fervent and humble prayers, and in the fullness of faith flee always to Our Lord Jesus Christ, who redeemed us to God in his blood, and earnestly and constantly supplicate His most sweet Heart, the victim of most burning love toward us, that He would draw all things to Himself by the bonds of His love, and that all men inflamed by His most holy love may walk worthily according to His heart, pleasing God in all things, bearing fruit in every good work. But since without doubt men's prayers are more pleasing to God if they reach Him from minds free from all stain, therefore we have determined to open to Christ's faithful, with Apostolic liberality, the Church's heavenly treasures committed to our charge, in order that the said faithful, being more earnestly enkindled to true piety, and cleansed through the sacrament of Penance from the defilement of their sins, may with greater confidence pour forth their prayers to God, and obtain His mercy and grace.

10. By these Letters, therefore, in virtue of our Apostolic authority, we concede to all and singular the faithful of the Catholic world, a Plenary Indulgence in the form of Jubilee, during the space of one month only for the whole coming year 1865, and not beyond; to be fixed by you, venerable brethren, and other legitimate Ordinaries of places, in the very same manner and form in which we granted it at the beginning of our supreme Pontificate by our Apostolic Letters in the form of a Brief, dated November 20, 1846, and addressed to all your episcopal Order, beginning, "Arcano Divinae Providentiae consilio," and with all the same faculties which were given by us in those Letters. We will, however, that all things be observed which were prescribed in the aforesaid Letters, and those things be excepted which we there so declared. And we grant this, notwithstanding anything whatever to the contrary, even things which are worthy of individual mention and derogation. In order, however, that all doubt and difficulty be removed, we have commanded a copy of said Letters be sent you.

11. "Let us implore," Venerable Brethren, "God's mercy from our inmost heart and with our whole mind; because He has Himself added, 'I will not remove my mercy from them.' Let us ask and we shall receive; and if there be delay and slowness in our receiving because we have gravely offended, let us knock, because to him that knocketh it shall be opened, if only the door be knocked by our prayers, groans and tears, in which we must persist and persevere, and if the prayer be unanimous . . . let each man pray to God, not for himself alone, but for all his brethren, as the Lord hath taught us to pray."¹³ But in order that God may the more readily assent to the prayers and desires of ourselves, of you and of all the faithful, let us with all confidence employ as or advocate with Him the Immaculate and most holy Virgin Mary, Mother of God, who has slain all heresies throughout the world, and who, the most loving Mother of us all, "is all sweet . . . and full of mercy . . . shows herself to all as easily entreated; shows herself to all as most merciful; pities the necessities of all with a most large affection;"¹⁴ and standing as a Queen at the right hand of her only begotten Son, our Lord Jesus Christ, in gilded clothing, surrounded with variety, can obtain from Him whatever she will. Let us also seek the suffrages of the Most Blessed Peter, Prince of the Apostles, and of Paul, his Fellow-Apostle, and of all the Saints in Heaven, who having now become God's friends, have arrived at the heavenly kingdom, and being crowned bear their palms, and being secure of their own immortality are anxious for our salvation.

12. Lastly, imploring from our great heart for You from God the abundance of all heavenly gifts, we most lovingly impart the Apostolic Benediction from our inmost heart, a pledge of our signal love towards you, to yourselves, venerable brethren, and to all the clerics and lay faithful committed to your care.

Given at Rome, from St. Peter's, the 8th day of December, in the year 1864, the tenth from the Dogmatic Definition of the Immaculate Conception of the Virgin Mary, Mother of God.

In the nineteenth year of Our Pontificate.

2. Cecil Rhodes wanted to establish a secret society to bring the entire world under British rule.

On June 2, 1877 Cecil Rhodes wrote his Confession of Faith.
For the entire Confession of Faith see [Cecil John Rhodes
Confession of Faith 1877](#)

Rhodes said –

“ **Why should we not form a secret society with but one object the furtherance of the British Empire and the bringing of the whole uncivilised world under British rule for the recovery of the United States for the making the Anglo-Saxon race but one Empire.**

.
On September 19, 1877, Cecil Rhodes drafted his first will. The first clause of the 1877 will bequeathed his wealth as follows:

To and for **the establishment, promotion and development of a Secret Society, the true aim and object whereof shall be for the extension of British rule throughout the world**, the perfecting of a system of emigration from the United Kingdom, and of colonisation by British subjects of all lands where the means of livelihood are attainable by energy, labour and enterprise, and especially the occupation by British settlers of the entire Continent of Africa, the Holy Land, the Valley of the Euphrates, the Islands of Cyprus and Candia, the whole of South America, the Islands of the Pacific not heretofore possessed by Great Britain, the whole of the Malay Archipelago, the seaboard of China and Japan, **the ultimate recovery of the United States of America as an integral part of the British Empire**, the inauguration of a system of Colonial representation in the Imperial Parliament which may tend to weld together the disjointed members of the Empire and, finally, the foundation of so great a Power as to render wars impossible and promote the best interests of humanity.

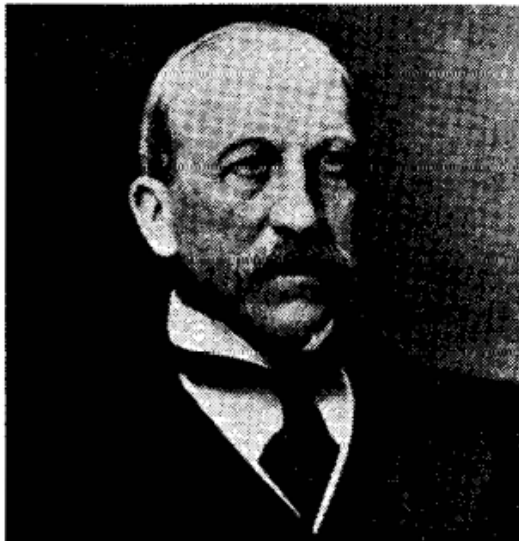

“ **...development of a Secret Society, the true aim and object whereof shall be for the extension of British rule throughout the world, ... the ultimate recovery**

of the United States of America as an integral part of the British Empire....

For further data and documentation on Cecil Rhodes and the Secret Society see

Global Conspiracy 101 Cecil Rhodes and His Secret Society
The Round Table – What is it Really

Alfred Milner married into the Cecil family and he was the head of the secret society.

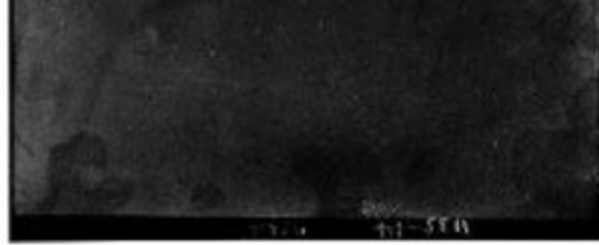

Lord Alfred Milner in 1914,
the representative of the “race
patriots.”

The secret society has an Association of Helpers who are visible to the public. It is called the **Round Table**.

Lord Rothschild in Britain and other international bankers such as the Rockefellers, funded the Round Table.

Lionel Walter Rothschild

[The Anglo-American Establishment](#) by Carroll Quigley, professor of history –

“ Cecil Rhodes... left his fortune to form a secret society, which was to devote itself to the preservation and expansion of the British Empire. ... this secret society was created by Rhodes and... Lord Milner, and continues to exist to this day.

This society has been known... as the Round Table... I have chosen to call it the Milner Group.

Alfred Milner was able to dominate this Group... It is doubtful if Milner could have formed his Group without assistance... the Cecil Bloc gave him the political influence without which his ideas could easily have died in the seed...

The Milner Group could never have been built up by Milner's own efforts. He had no political power or even influence. The power that was utilized by Milner and his Group was really the power of the Cecil family and its allied families...

MEMORANDUM FOR: THE RECORD

SUBJECT : Supplement to Project MKULTRA, Sub-
project 94

1. The purpose of this supplement is to provide additional funds whereby investigations on the remote directional control of activities of selected species of animals may be continued and extended. A system of localized stimulation of the brain is being utilized.

2. Initial biological work on techniques and brain locations imparting specific stimulation which permits directional control of rats and burros will be extended to dogs. The feasibility of remote control of activities in two species of mammals has been demonstrated by limited trials. In order to capitalize on this technical break-through further investigations are necessary. The investigations are being directed toward refinement of techniques with the ultimate objective being to provide practical systems suitable for operational application.

A memorandum on the continuation of Subproject 94 is made on 18 October 1960.

This document is on black vault cd #1, folder 17497 , document 30

18 October 1960

MEMORANDUM FOR: THE RECORD

SUBJECT : Project MKULTRA, Subproject No. 94

1. The purpose of this subproject is to provide for a continuation of investigations on the remote directional control of activities in selected species of animals. Miniaturized stimulating electrode implants in specific brain center areas will be utilized.

2. Initial biological work on techniques and brain locations essential to providing conditioning and control of animals has been completed. The feasibility of remote control of activities in several species of animals has been demonstrated. The present investigations are directed toward improvement of techniques and will provide a precise mapping of the useful brain centers in selected species. The ultimate objective of this research is to provide an understanding of the mechanisms involved in the directional control of animals and to provide practical systems suitable for

H
[redacted] application.

94-19

3. [redacted] functions as cut out and cover for this subproject. The necessary research and development is being conducted through [redacted]

"The ultimate objective of this research is to provide an understanding of the mechanisms involved in the directional control of animals and to provide practical systems suitable for (blacked out human) application."

My wife tracked down information concerning MK Ultra subproject 94 – which I don't think was known before.

From her [Brotherhood Series, Part 5A](#) –

Next up on CD #1, is one of the document series that I figured who was involved in this particular *dark* (top secret) MKULTRA sub-project.

“ Just to recap, these documents are from Black vault's website that has a [complete listing of declassified MKUltra documents](#). Using Black Vault's layout, the following documents are on [cd #1 main directory](#).

This is sub-project #94, which was research initially using dogs and other animals, with goals of identifying brain areas, implanting micro-electrodes directly in those brain areas, and then controlling brain action by remote-control, with the ultimate goal of human application.

I figured out that this involved a company called Panoramic Research, which one of the heads was private citizen Woodrow “Woody” Wilson Bledsoe, and he was accompanied by his friend Iben Browning. I have never seen anything linking these two with this particular MK ULTRA subproject.

Dr. Colin Ross is THE ONLY source that I originally found that connects MK Ultra subproject 94 with Panoramic Research. Colin wrote a book called *Bluebird: Deliberate Creation of Multiple Personality By Psychiatrists* [Manitou Communications, Inc., 2000, which was reissued as [The CIA Doctors: Human Rights Violations by American Psychiatrists](#) in 2006.]

Pages 326,328, and 330 discuss MK Ultra subproject #94. here's a quote:

“ Most MK-ULTRA research concerned biological, chemical, or hypnotic means of behavioral control, but Contract 94 (classified Top Secret) with Bio-Research, Inc., and Panoramic Research, Inc., in 1959 was for “Brain stimulation studies – remote control of animal behavior”;

David Price published an article in *Anthropology Today*, (Vol 23 No 3, June 2007) that has a chart of Human Ecology grants from 1960 to 1963. Price’s chart shows Panoramic Research getting an 80,000 dollar contract, but has no connection to anyone’s name.

David Price’s chart:

Anthropological identification of the determinants of Chinese behavior	Carr, William K.	anthropology	\$48,480
Implications of a hypothesized congruence between personality systems	Gittinger, David R.	psychology	\$50,000
Panoramic Research, Inc.	I figured out that this is Browning and Bledsoe - subproject 94		\$80,000
Cross-cultural generality of meaning systems	Osgood, Charles E.	communications	\$83,406
Interdisciplinary conference program			\$116,116

My wife pieced all this together and figured out **who** was involved in this particular subproject.

This was the key:

A memorial from the University of Texas:

“

Panoramic Research, Inc.

“

In 1960, Woody, [Woodrow Wilson Bledsoe] along with Iben Browning and Lloyd Lockingen, left Sandia to start Panoramic Research, Inc. (PRI), in Palo Alto, California. The majority of the work involved AI-related contracts from the U.S. Department of Defense and various intelligence agencies.

We were constantly, repeatedly, searching for,

proposing and trying out ideas which we hoped would “move the world.” That was one of the first AI groups before the term “Artificial Intelligence” came into use (Bledsoe 1976).

So... in 1960, just after the proposal for MK Ultra subproject 94 in 1959, Woody Bledsoe hotfoots it out to Palo Alto where Stanford Research Institute is located, and starts up Panoramic Research.

Bledsoe *was there at SRI just in time* for the CIA projects of Willis Harmon, Gregory Bateson, and AI Stolaroff’s second-generation LSD testing to begin it’s initial preparatory stages.

Woodrow Wilson “Woody” Bledsoe

Bledsoe already had top secret clearance because he had worked with Sandia, a Department of Defense contractor, doing nuclear weapons research starting in 1953. This is also where he met Iben Browning and they became friends.

Put that together with this, from David Price:

Computer simulation of a simple society	➔	Browning, Iben	computer science	\$7,500
Studies of small group behavior		Sherif, Muzafer	psychology	\$8,500
Experiments in extrasensory perception	➔	Abrams, Stephen I.	psychology	\$8,579
Identification of individuals prone to schizophrenia		Mednick, Sarnoff A.	psychology	\$10,046
Effects of personality on drug reactions		Aaronson, Bernard S.	psychology	\$12,900
Mental illness and identity		Hirvas, Juhani	sociology	\$16,479

Mental illness and identity	Allardt, Erik	sociology	\$22,551
Psychiatric rating scales	Sammel B. Lyerly	psychology	
Psychiatric rating scales	Preston S. Abbott	psychology	
Measurement of motivation	Eysenck, H.J.	psychology	\$26,030
Institute for Experimental Psychiatry	Orne, Martin T.	psychology	\$30,000
Neighborhood family clinics (Harlem)	Berle, Beatrice	medicine	\$32,817
Study of the genetic code	Bledsoe, W.W.	mathematics	\$35,000
Physique and psychological functioning	Haronian, Frank	psychology	\$39,000
Artificial intelligence	Browning, Iben	computer science	\$40,000
Pattern recognition	Bledsoe, W.W.	psychology	\$45,000
Comparative learning behavior of different personality types	Schucman, Helen	psychology	\$47,832
Comparative learning behavior of different personality types	Thetford, William N.		

See how many *other* grants Browning and Bledsoe also had?

And now you know that Bledsoe and Browning (and Lockingen) were involved with the creation of **Panoramic Research**, and that they went to SRI territory – Palo Alto.

Note:

Stanford's property and buildings sort of spans across *both* Palo Alto and Menlo Park, with basically one major street being a separation point between the two “towns”.

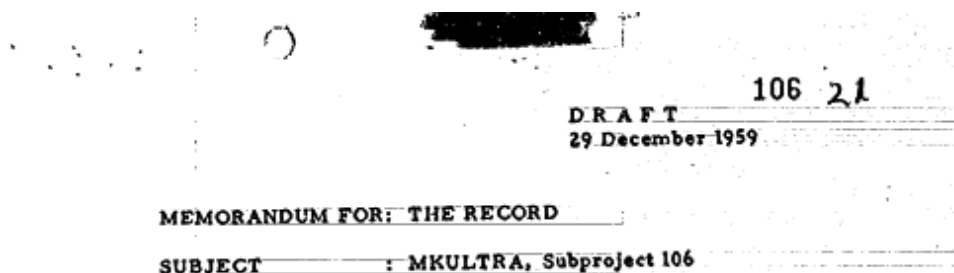

And now you know that *besides* multiple other grants being given them as individuals, **there was also MK Ultra subproject 94** that they were working on, which happens to be exactly what Delgado was doing – almost word for word.

For much more about these two companies (BioResearch and Panoramic) see my wife's article [Brotherhood Series, Part 5A](#).

5. The MKULTRA subprojects on electric stimulation of the brain we have found so far are 94,106,142.

Subproject 106 concerns implanting electrodes in the brains of animals and doing a study of all the Russian literature concerning mind control of this type. ⁶

Subproject 106 began in 1959. Image #35 is the first page of the original proposal –

1. The purpose of MKULTRA subproject 106 is to undertake studies on biological systems with particular reference to quantifying the relationship between a stimulus and the biological response to that stimulus. The lack of a general understanding and adequate methodology for handling this relationship in a realistic fashion is one of the major roadblocks to rapid technical progress in the fields of assessment and control of behavior at the present time. It is planned to utilize an interdisciplinary approach in this research with emphasis on the side of the physical sciences. Several advanced mathematical techniques and physical models have been suggested as fruitful research areas not presently being exploited. Problems arising from the difference in excitability and behavioral response among members of an animal population will be analyzed. An attempt will be made to elucidate relationships between lower animals and man by comparing physiological, biochemical, and behavioral characteristics. By means of animal preparations particularly suitable for demonstrating specific functions evaluations will be made of biological

Image #36, the second page of this proposal shows they want to study Russian research about this.

[excerpt]

2  -2- 106 21

generalizations arising from the use of one kind of animal as an experimental variable. A critical review will be made of selected foreign literature especially that on the neurophysiological mechanism of conditioning and related behavioral research. Particular reference will be made to the recent shift on the part of the Russians from the strict "Pavlovian" view to a more realistic approach to the problem.

Image #34 shows approval for subproject 106.

 106 21

29 December 1959

MEMORANDUM FOR: COMPTROLLER

ATTENTION : Finance Division

SUBJECT : MKULTRA, Subproject 106

Under the authority granted in the memorandum dated 13 April 1953 from the DCI to the DD/A, and the extension of this authority in subsequent memoranda, Subproject 106 has been approved and \$21,855.00 of the over-all MKULTRA project funds has been obligated to cover the subproject expenses. This obligation of funds should be charged to Allotment 0525-1009-4902.

Subproject 106 is continued on 22 May 1962. It is on [Black Vault's MKULTRA archives](#) disk 3, folder 17362.

Within that folder, is the first page of the newer proposal – image #10.

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject No. 106

1. It is proposed to continue research under MKULTRA subproject No. 106 on studies of biological systems with particular reference to quantifying the relationship between a stimulus and the biological-response to that stimulus. Problems arising from the difference in excitability and behavioral response among members of an animal population will be analyzed. By means of animal preparations particularly suitable for demonstrating specific functions, evaluations will be made of biological generalizations arising from the use of one species of animal as an experimental variable. A critical review will be maintained of selected foreign literature especially that on the neurophysiological mechanism of conditioning and related behavioral research.

2. Because of the very low level of effort on which this program is to be continued during the next year, reimbursements will be made directly to Mr. [REDACTED] the chief investigator, on the basis of his invoices for professional services rendered at the times that these

“ Gottlieb carefully pruned the MKULTRA lists, turning over to the Science Directorate the exotic subjects that showed no short-term operational promise and keeping for himself those psychological, chemical, and biological programs that had already passed the research stage.

10. The reorganization of Technical Services Staff during 1961 and 1962 was described in CIA document #59, 26 July 1963, Report of the Inspection of MKULTRA, [Black Vault’s MKULTRA archives](#) disk#4, folder 17748 – 42 images.

Image #1 – **the beginning of the report** – is pictured below.

SUBJECT : Report of Inspection of MKULTRA

1. In connection with our survey of Technical Services Division, DD/P, it was deemed advisable to prepare the report of the MKULTRA program in one copy only, in view of its unusual sensitivity.

2. This report is forwarded herewith.

3. The MKULTRA activity is concerned with the research and development of chemical, biological, and radiological materials capable of employment in clandestine operations to control human behavior. The end products of such research are subject to very strict controls including a requirement for the personal approval of the Deputy Director/Plans for any operational use made of these end products.

4. The cryptonym MKULTRA encompasses the R&D phase and a second cryptonym MKDELTA denotes the DD/P system for control of the operational employment of such materials.

The provisions of the MKULTRA authority also cover the administration and control of this latter activity were found to be generally satisfactory and are discussed in greater detail in the main body of the report on TSD.

5. MKULTRA was authorized by the then Director of Central Intelligence, Mr. Allen W. Dulles, in 1953. The TSD was assigned responsibility thereby to employ a portion of its R&D budget, eventually set at 20%, for research in behavioral materials and under purely internal and compartmented controls, (further details are provided in paragraph 3 of the attached report). Normal procedures for project approval, funding, and accounting were waived. However, special arrangements for audit of expenditures have been evolved in subsequent years.

Image #19 is the first page of the proposal. The purpose is – “a small biological program of electrical brain stimulation involving some new approaches to the subject”

“Some of the uses proposed for these particular animals would involve possible delivery systems for BW/CW agents or for direct executive action type operations”

BW = Biological Warfare

CW = Chemical Warfare

142-14
22 May 1962

MEMORANDUM FOR THE RECORD

SUBJECT : Project MKULTRA, Subproject No. 142

1. The purpose of this subproject is to provide funds to support a small biological program of electrical brain stimulation involving some new approaches to the subject by [REDACTED] C
The support allows for the rental of minimum space and equipment and the part-time employment of a "pair of hands" to carry out the work planned by [REDACTED] C

2. The reason for separating this work financially from the other efforts of [REDACTED] in the Agency's behalf is to allow him to engage in some very practical experiments at some point in the work which would present security problems if this effort were to be handled in the usual way. Some of the uses proposed for these particular animals would involve possible delivery systems for BW/CW agents or for direct executive action type operations as distinguished from the eavesdropping application of [REDACTED] H

3. As indicative in the attached proposal and budget, the total cost of this project for one year will not exceed \$7,500.00. Charges should be made against allotment number 2125-1390-3902.

B The [REDACTED] will function as cover and cutout for these funds. [REDACTED]

Image #10 shows the project began on 1 July 1962.

Image #13 is a Status Report

A review of different aspects of comparative neurology has been carried out. This has taken the form of an extensive library review of the neurological literature, and a compilation of considerable data on the quantitative aspects of the nervous systems of various species.

Some biological materials have been expended, and some development has been accomplished on electronic gear which will enable the study.

As I hope, the [REDACTED] will extend the period of the grant through December 31, 1964, I will have the remainder of the report at that time.

The next image is #21, it talks about switching to cold-blooded animals.

PROPOSAL

It is proposed to carry out certain biological studies involving electrical brain stimulation of cold-blooded animals. In addition to the various theoretical reasons for such studies, it appears that certain practical guidance systems involving more detailed behavioral control of both positive and negative sorts may be possible than are presently attainable in the warm-blooded animals being investigated. It is also possible that these simpler systems can accomplish the same operational goals with far less critical demands on the electronic parts of the guidance and control system.

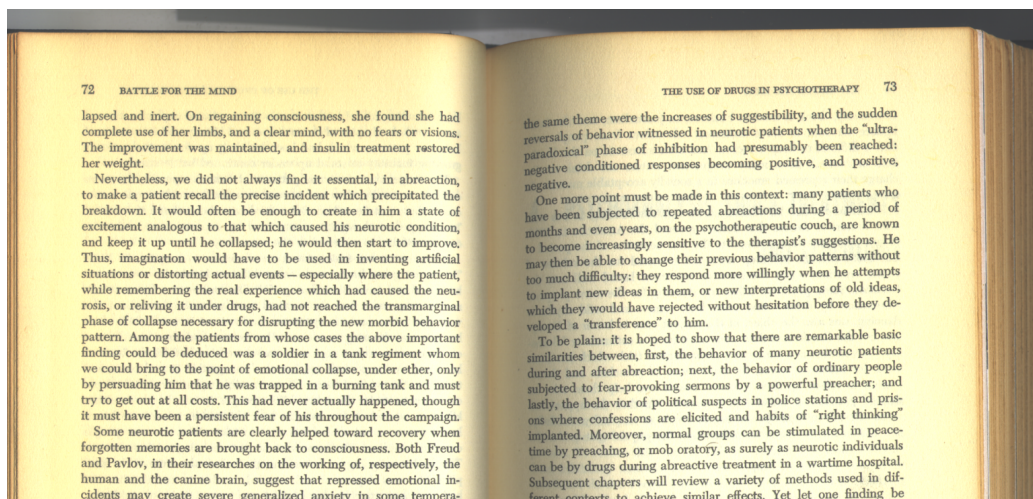

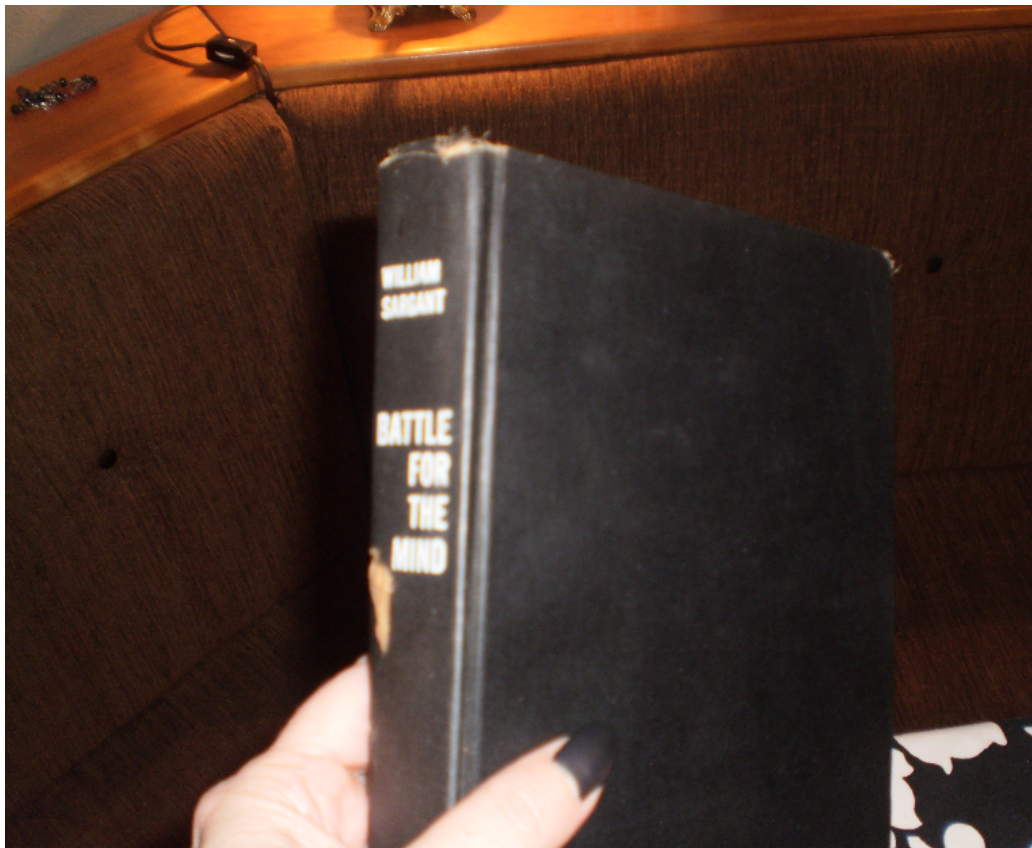

The work to be done will consist of literature search, experimental placement of electrodes, observation of effects of stimulation and collation of information regarding the behavioral effects of stimulation in the various well defined areas. Biologically stable preparations with defined stimulation properties will result from this work.

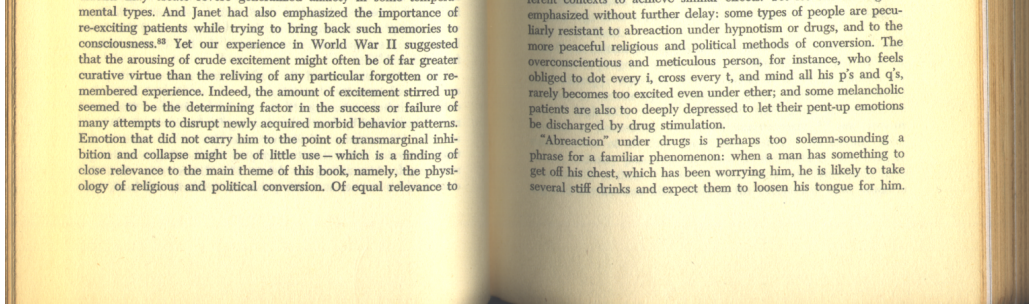

This early work branched into other arenas, resulting in the later creation of a cyborg beetle which National Geographic highlighted. Note the wires going to the brain –

15. The set of documents about the reorganization of Technical Services Staff during 1961 and 1962

[26 July 1963, Report of the Inspection of MKULTRA, [Black Vault's MKULTRA archives](#) disk#4, folder 17748 – 42 images] **also covers which areas/projects they were still interested in.**

In May of 1962, The new CIA director John McCone had tasked the CIA Inspector General Lyman Kirkpatrick to do an inspection and re-organization of the CIA TSS division (Gottlieb's area). Lyman was an OSS veteran and founding "father" of the CIA and had been serving as IG for almost 10 years by then. He was promoted to executive director though, and so the responsibility passed to John S. Earman Jr. The documents listed above are the result of his inspections.

Earman's Washington Post obituary reveals a bit about his background. He had served in WWII as a Lieutenant Colonel and then in 1946 he joined the CIG (Central Intelligence Group) which was the forerunner agency for the CIA in 1947. He then served as special assistant to the Director of the CIA from 1950 to 1962 before being appointed Inspector General in May. He remained in this position until he died in 1974.

John S. Earman Jr.

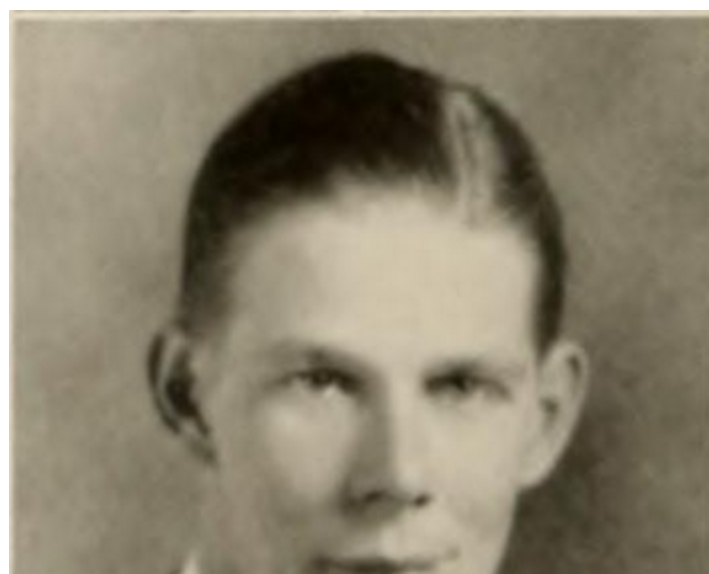

Image from the [Kaleidoscope](#) –
publication of Hampton-Sydney College in Virginia.

A word on Earman –

Earman was involved in several projects to bring over Nazi supporters and war criminals to the United States as citizens, then using them, in some cases, in CIA black operations around the world. Please see [CIA Inspector General Earman – The Fox investigating the Foxes](#) for more information.

Now, let's see what **Advanced Mind Control Weapons** projects they wanted to keep.

In the big 26 July 1963 report detailing Mr. Earman's "investigation", he detailed how many projects had been initiated under MKULTRA, how many were still ongoing, and what they were still interested in.

The report stated that there Gottlieb's TSD had initiated 144 projects relating to the control of human behavior during the previous ten years of operation of the MKULTRA program. Gottlieb had pruned this down to **25 that he wanted to keep.**

The report lists what are the active projects in Point 31, as follows:

31. Active projects may be groups under the
“ following arbitrary headings.
Many projects involve activity in two or more of the
areas listed.

- a. basic research in materials and processes
- b. procurement of research materials
- c. testing of substances on animals and human beings
- d. development of delivery techniques

- d. development of delivery techniques
- e. projects in offensive/defensive BW, CW, and radiation [BW=Biological Warfare, CW=Chemical Warfare]
- f. miscellaneous projects; e.g., (1) petroleum sabotage, (2) defoliants, (3) **devices for remote measurement of physiological processes**

The men from ORD tried to create their own latter-day version of the Society for the Investigation of Human Ecology. Located outside Boston, it was called the Scientific Engineering Institute, and Agency officials had set it up originally in 1956 as a proprietary company to do research on radar and other technical matters that had nothing to do with human behavior. Its president was Dr. Edwin Land, the founder of Polaroid. **In the early 1960s, ORD officials decided to bring it into the behavioral field and built a new wing to the Institute's modernistic building for the "life sciences."** They hired a group of behavioral and medical scientists who were allowed to carry on their own independent research as long as it met Institute standards. These scientists were available to consult with frequent visitors from Washington, and they were encouraged to take long lunches in the Institute's dining room where they mixed with the physical scientists and brainstormed about virtually everything. One veteran recalls a colleague joking, "If you could find the natural radio frequency of a person's sphincter, you could make him run out of the room real fast." Turning serious, the veteran states the technique was "plausible," and he notes that many of the crazy ideas bandied about at lunch developed into concrete projects. ⁵

Scientific Engineering Institute, another CIA front group.

This is the man that headed it.

Dr. James H. Wakelin

(1964) President of Scientific Engineering

Wakelin is listed as President of the Scientific Engineering Institute through 1965, when he became chairman of the Army's Research Analysis Corporation –

18 September 1964 and served until 25 June 1965, when Dr. James H. Wakelin, the president of the Scientific Engineering Institute of Waltham, Massachusetts, chief scientist at Ryan Aeronautical Corporation, and a former assistant secretary of the Navy for research and development, was elected chairman.⁸¹ Dr. Wakelin resigned in January 1971 to become assistant secretary of commerce for science and technology, and his place

16. Article by D. Pasternak – Wonder Weapons, U.S. News and World Report, July 7, 1997 –

By using very low frequency electromagnetic radiation--the waves way below radio frequencies on the electromagnetic spectrum--he found he could induce the brain to release behavior-regulating chemicals. "We could put animals into a stupor," he says, by hitting them with these frequencies. "We got chick brains--in vitro--to dump 80 percent of the natural opioids in their brains," Byrd says. He even ran a small project that used magnetic fields to cause certain brain cells in rats to release histamine. In humans, this would cause instant flulike symptoms and produce nausea. "These fields were extremely weak. They were undetectable," says Byrd. "The effects were nonlethal and reversible. You could disable a person temporarily."

Byrd hypothesizes. "It [would have been] like a stun gun."

Byrd never tested any of his hardware in the field, and his program, scheduled for four years, apparently was closed down after two, he says. "The work was really outstanding," he grumbles. "We would have had a weapon in one year." Byrd says he was told his work would be unclassified "unless it works." Because it worked, he suspects that the program "went black." Other scientists tell similar tales of research on electromagnetic radiation turning top secret once successful results were achieved. There

22. The CIA Office of Research and Development was interested in parapsychology.

Agency officials wanted to know:

- whether psychics could read minds or control them from afar (telepathy),
- if they could gain information about distant places or people (clairvoyance or remote viewing)
- if they could predict the future (precognition)
- influence the movement of physical objects or even the human mind (telekinesis).

The above list of their parapsychology goals is from an excellent article by John Wilhelm called:

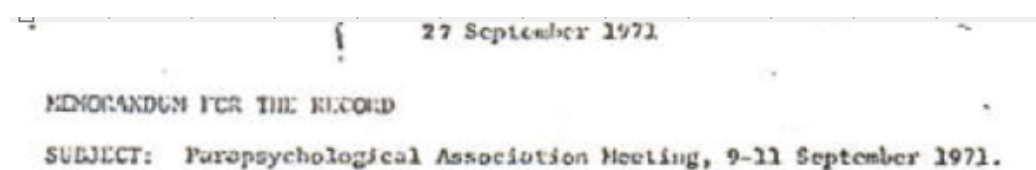

[Psychic Spying – Washington Post August 7, 1977](#)

23. September 9-11, 1971 – A CIA officer meeting at the New York Parapsychological Association

Here is a PDF of the declassified CIA doc.

- [USAParapsychologicalAssociationMeeting astronaut 1965 1964](#)

Example page –

One of the attendees at the meeting was a Mr. [redacted]. He traveled to the meeting on government orders and caused quite a stir because of his association and funding potentialities. Already Mr. [redacted] has let one grant for the development of some equipment in the ESP field. The money was small somewhere around [redacted] was given to a physicist by the name of Dr. [redacted]. I chatted with Mr. [redacted] during the meetings and he suggested we get together in [redacted] to discuss the people who are interested in being funded. I think he is somewhat unsure of the personalities and credentials of some of the individuals requesting funds. I told him I would be happy to meet with him.

Perhaps the most interesting experience was an accidental meeting with [redacted]. [redacted] is evidently a well known psychic who is working with many prominent people in the field and reports having important contacts in American and Foreign society. [redacted] feels it important that a mind expansion program be set up in order to explore all areas of ESP and related phenomena. No drugs would be permitted. [redacted] feels the savior of the youth would come from such programs and would help prevent more of the youth going on drugs. [redacted] is planning to visit Russia and purportedly has an appointment with the Pope in Rome the last week in September or the first week in October. [redacted] requested that I assist [redacted] in some undertermined fashion to make sure that the good people in the paranormal area get into these programs and that money not be wasted on the less talented. We spent several hours discussing these problems. [redacted] asked if [redacted] could get in touch with me at a later date. The contact was made by [redacted] on 23 September. [redacted] plans to visit [redacted] on the 27th and would like to get together to discuss ESP--particularly the experiments with Astronaut Mitchell. I said I would be happy to see [redacted] and discuss the problems with [redacted].

28. [Kit Green Interview 2008](#)

29. Ingo Swann wrote an auto-biography in 1996 titled: Remote-Viewing The Real Story: An Autobiographical Memoir.

Swann described that in early October 1971, he began working with Dr. Karlis Osis at American Society for Psychical Research (ASPR). They were focusing on Out of Body Experiences (OOBE).

“ My only reservation was that I did not have the least idea of how to float up to the ceiling. I was well aware of the famous OOB phenomena reported world-wide and since antiquity.

I had gotten all of the appropriate books, tried everything suggested in them, to little apparent avail.

Although many, including some of Osis's other subjects, claimed they could “go OOB at will,” evidence of this was quite slim.

...if anyone could go OOB at will, then the world would certainly be a different place, and psychic spying in the OOB state would have already been incorporated into you know where. In 1971 out-of-body experiencing had not yet been hysterically hyped as it was soon to be.

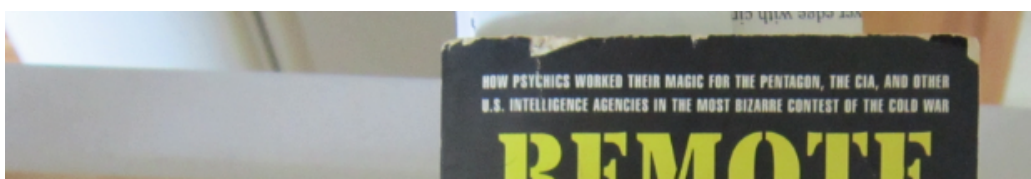

I told Osis that I believed OOB to consist only of spontaneous factors, and usually within some kind of unusual situation, and that I did not know how to do it.

34. In 1955, Louis Jolyon West became a subcontractor for MKUltra subproject 43. He was given at least \$20,000 by the CIA while he was chairman of the department of Psychiatry at the University of Oklahoma.

PDF – [MKULTRA subproject 43 documents](#) – found in Black Vault CD#4, folder 17441 originally –
this is **Dr. Louis Jolyon West** subproject.

This document shows the CIA paid West \$20,800.00 for MK Ultra subproject 43.

The proposal submitted by West was titled “Psychophysiological Studies of Hypnosis and Suggestability” with an accompanying document titled “Studies of Dissociative States”.

Some quotes from West’s proposal –

Preliminary clinical research during 1955-56 has

yielded promising leads in terms of knowledge of how hypnotizability can be influenced by pharmacological means. Several drugs have been identified that apparently are effective in speeding the induction of the hypnotic state, and in deepening the trance that can be produced in given subjects.

Experiments involving altered personality function as a result of environmental manipulation (chiefly sensory isolation) have yielded promising leads in terms of suggestibility and the production of trance-like states. There is reason to believe that environmental manipulations can affect the tendencies for dissociative phenomena to occur. Isolation, in particular, can markedly change the individual's response to suggestion in the form of verbal communication.

It is proposed that new experiments utilizing special environmental manipulations, including sensory isolation, be begun with a view toward determining the ways in which the results of psychophysiological alterations can be quantified, and the ways in which these altered-states can be utilized in the production of increased influenceability in normal subjects.

Current experiments have definitely established a number of ways in which hypnotic suggestions can bring about states of marked psychological stress in suitable subjects, with resultant changes in neurophysiological and neuro-endocrinological function.

35. Article: "Mind Control" by Harry V. Martin and David Caul
February 24, 1974 edition of the Congressional Record, No. 262E,
Vol. 118

The Violence Control Center is actually the brain child of William Herrmann, a CIA agent, as part of a "pacification plan" for California

Herrmann, a CIA agent, as part of a "pacification plan" for California. Herrmann works with the Stand Research Institute, the RAND Corporation, and the Hoover Center on Violence.

36. Jolly West planned to have a Center for the Reduction of Violence where he would use behavior modification on young children "before they got a chance to become a criminal".

Some of the planned areas of study for the Center include studies of violent individuals, experiments on prisoners from Vacaville and Atascadero, experiments on hyperkinetic children, experiments with violence-producing and violent inhibiting drugs, hormonal aspects of passivity and aggressiveness in boys, studies to discover and compare norms of violence among various ethnic groups, and studies of "pre-delinquent" children. Plans include encouragement to law enforcement to keep computer files on "pre-delinquent" children, which would make possible the treatment of children "before they become delinquents."

Senator Sam Ervin was investigating abuses of human rights, and there is quite a publication that came out of it, that had this document as one of its items – ([found at Black Vault's](#) MKULTRA archives).

The first thing that happened in 1972, is that Dr. William Sweet tried to convince Congress of the need for “special units for study of violent behavior.” Starting on page 217 of the Individual Rights PDF is the Testimony of William H. Sweet, Chief of Massachusetts General before the Senate Labor-HEW Appropriations Hearings May 28, 1972.

The House and Senate Appropriations Committees for the 2nd Session of the 91st Congress agreed that a study of the causes of violent behavior leading to the critical injury or death of others should be funded by an appropriation of \$500,000 for the first year operations.

This research has sought (1) to identify those with physical brain disease who are likely to be dangerously assaultive and (2) to develop medical and psychiatric means to help people to refrain from undertaking senseless violence.

In appropriate cases we have applied specific surgical diagnosis and therapy when there is unequivocal evidence of focal brain disease.

Two patients, after prolonged trials of psychotherapy, psychotropic drugs, ataractics, anti-convulsant medication and other forms of medical management, did not have either their seizures or episodic behavior disturbance controlled and they

had the implantation of amygdala electrodes, that is **electrodes were placed into the... temporal lobe of their brains** for recording, stimulation and eventual lesion-making.

The money would be allocated to several of the interested centers qualified for the research...

This testimony is being presented in behalf of the Neuropsychiatric Institutes of the University of California at Los Angeles – **under the direction of Professor Louis Jolyon West...**

Dr Sweet: This has to do with special units for the study of violent behavior, methods of determining which individuals may be becoming dangerous to society. Means of identifying them and treating them.

The next thing that happened was that on September 1, 1972, **Jolly West submitted a proposal** for one of these 'special units' to be in California at an abandoned Nike missile base. (see [PDF](#))

West proposal starting on page 334 –

The relationship of brain function to indiscriminately aggressive and impulsively violent behavior seen in hyperkinetic **children...**

It is even possible to record bioelectrical changes in the brains of freely moving subjects, through the use of remote monitoring techniques.

A telemetric system consists of small electronic devices attached to a subject that transmit via radio waves information regarding the location and physiological state of the wearer. A telemetry system provides a method whereby phenomena may be measured or controlled at a distance from where they occur- IE: remotely (Grisamore, 1965). **It also provides long-range, day-to-day, continuous observation and control of the monitored subject**, since the data can be fed into a computer which can act as both an observer and a controller.

...Schwitzgebel (1967a, b; Note: Harvard Law Review, 1966) at Harvard has been experimenting with a small portable transmitter, called a **Behavior Transmitter Reinforcer (BT R)**

transmitter, called a **Behavior Transmitter-Reinforcer (BT-R)** which is small enough to be carried on a belt...

An examination of published research in electrical stimulation of the brain suggests two crude methods of controlling human behavior:

by “blocking” of the response, through the production of fear, anxiety, disorientation, loss of memory and purpose, and even, if need be, by loss of consciousness through conditioning behavior by the manipulation of rewarding and aversive stimuli...

...when one begins to implant endoradiosondes subcutaneously or to control actions through electrical stimulation of the brain, one runs into a particularly troublesome objection, which is often included within the scope of “privacy,” although perhaps it should be separately named as the “human dignity” or “sacred vessel of the spirit” argument.

Any system which allows him the freedom of the open community, which maintains an unobtrusive surveillance and which intervenes only rarely to block or frustrate his activities can surely appear as a vast improvement in his situation.

Studies of abnormal electrical activities within the brain, involving various brain diseases and brain lesions, will be carried out in the neurological and physiological laboratories to clarify their relationship to various types of violent behavior.

The subjects of such studies will include hyperkinetic children...

West is talking about incorporating the ideas from The Use of Electronics in the Observation and Control of Human Behavior and Its Possible Use in Rehabilitation and Parole which is Item VI.D.3 starting on page 609 of the PDF.

On page 644 –

We need to find the stimulus to which the subject responds. We also need to find out how he thinks covertly and to change how he thinks.

We need to dope up many of these men in order to calm them

down to the point that they are accessible to treatment.

Those who can't be controlled by drugs are candidates for the implantation of subcortical electrodes (electrodes plunged deep into the brain].

The next thing to happen was that William Sargant hops a plane from London to California to meet up with Dr. West. Together they drove out to a former Nike missile site in the Santa Monica Mountains. It was the location that West and Sargant thought would be good for their proposed treatment center.

Sargant said, "It was accessible but remote. Securely fenced, it was ideal for Jolly's purpose—a Center for the Prevention of Violence."

West proposed that he and Sargant work together, using Sargant's previous research into "the pharmacology of violence-producing and violence-inhibiting drugs".

West wanted to use a vacated Nike Missile base for his Center for the Reduction of Violence.

On January 22, 1973 West wrote a proposal letter to J.M. Stubblebine, Director of Health in California.

[Item III.B.2.f]

STATE OF CALIFORNIA, DEPARTMENT OF MENTAL HYGIENE,
NEUROPSYCHIATRIC INSTITUTE,
CENTER FOR THE HEALTH SCIENCES,
Los Angeles, Calif., January 22, 1973.

J. M. STUBBLEBINE, M.D.,
Director of Health, Office of Health Planning, State of California, Sacramento,
Calif.

DEAR STUB: I am in possession of confidential information to the effect that the Army is prepared to turn over Nike missile bases to state and local agencies for non-military purposes. They may look with special favor on health-related applications.

Such a Nike missile base is located in the Santa Monica Mountains, within a half-hour's drive of the Neuropsychiatric Institute. It is accessible but relatively remote. The site is securely fenced, and includes various buildings and improvements making it suitable for prompt occupancy.

If this site were made available to the Neuropsychiatric Institute as a research facility, perhaps initially as an adjunct to the new Center for Prevention of Violence, we could put it to very good use. Comparative studies could be carried out there, in an isolated but convenient location, of experimental or model programs for the alteration of undesirable behavior.

Such programs might include control of drug or alcohol abuse, modification of chronic antisocial or impulsive aggressiveness, etc. The site could also accommodate conferences or retreats for instruction of selected groups of mental health-related professionals and of others (e.g., law enforcement personnel, parole officers, special educators) for whom both demonstration and participation would be effective modes of instruction.

My understanding is that a direct request by the Governor, or another appropriate officer of the State, to the Secretary of Defense (or, of course, the President) would be most likely to produce prompt results. Needless to say, I stand available to participate in any way that might be helpful.

Sincerely yours,

LOUIS JOLYON WEST, M.D.,
Medical Director,

Jolly West's Center for Violence proposal, if it had succeeded, would have been funded through the Law Enforcement Assistance

have been funded through the Law Enforcement Assistance Administration, which was a funding conduit for CIA mind control and behavior modification research.

On January 14, 1974, Senator Ervin squeezes LEAA head Mr. Santorelli about the West proposal –

The use of human subjects in biomedical and behavioral research raises several fundamental constitutional and ethical questions, and I believe LEAA must develop guidelines adequate to protect fully the constitutional rights of the subjects of LEAA-funded research in these areas.

Since last March a great deal of information pertaining to the UCLA Center has come to my attention. Much of this information indicates that programs are being contemplated for the Center that raise profound moral and constitutional questions, and it would be extremely desirable for LEAA to conduct a comprehensive review and evaluation of the projects under consideration.

Santorelli was forced to back down and Jolly West did not get funding.

40. The Game Player by Miles Copeland

Miles Copeland junior

Miles Copeland worked for the CIA for several decades. He said this about Hubbard and Scientology –

“ ...we planted an agent in the Scientology cult who became a ‘clear’ under the tutelage of Ron Hubbard himself, and then demanded and got more and more ‘operation expenses’ to be turned over, in addition to his own life’s savings, to the cause of Dianetics.

Copeland headed a CIA unit called Political Action Staff. One of his assistants was Bob Mandlestam.

Miles Copeland says that Ron Hubbard and Scientology worked for the CIA Political Action Staff –

“ ...there was something called Moral Rearmament... an interdenominational politico-religious movement started by a nut named Frank Buchman. It purported to deepen the spiritual life of its members, thereby inducing them to behave responsibly and altruistically in their public lives.

What caught Bob’s [Bob Mandlestam] eye was the social level at which the movement operated. It was aimed exclusively at leaders... the arrangement we made with Moral Rearmament gave us useful secret channels right into the minds of leaders not only in Africa and Asia but also in Europe.

When Bob made similar arrangements with Scientology, the brainchild of another nut, this one a science-fiction writer named Ron Hubbard, we were on our way to having a political action capability

which would make... Bill Casey's CIA seem trivial by comparison. 'MRA will hit 'em high, and the Church of Scientology will hit 'em low!' Bob liked to boast, and he was right.

Here are the pages in Copeland's book that document the above statements by Copeland –

41. Proof that they were researching esp enhancement through machines under NASA* and JPL at SRI, as well as **mind-machine interfaces**.

FOREWORD

In April of 1973, the Jet Propulsion Laboratory initiated a contract with the Stanford Research Institute to explore the potential enhancement of man/machine activities through ESP communications. The contract was initiated at the request of NASA Headquarters, which assigned to JPL the responsibility to monitor the contract and assure an objective experimental environment.

The experiment proposed by SRI was a scientific investigation of ESP and ESP learning through feedback or reinforcement. It was postulated that feedback would bring the phenomena, if such existed, to a readily measurable level. Reinforcement was provided by ESP teaching machines which continuously keep the subject informed as to his performance. The contract Statement of Work called for a totally automated tabulation of data. SRI was specifically funded to construct the teaching machines and to conduct a statistically significant set of trials with a suitable cross section of subjects. The subjects' tasks was to visualize which of several signals was being generated randomly by the machine.

PREFACE

This report is the final technical report summarizing the work performed under NASA Contract NAS7-100 Task RD-154 entitled, "Development of Techniques to Enhance Man/Machine Communication," covering the period 15 April 1973 to 15 May 1974. This report was prepared by the Electronics and Bioengineering Laboratory of SRI, Menlo Park, California. This program was under the administrative supervision of Mr. Earle Jones, and the principal investigator was Mr. Russell Targ. Other significant contributors to the program were Ms. Phyllis Cole, Dr. Harold Puthoff, Dr. Richard Singleton, and Dr. Charles Rebert.

From the article:

“...Frey and Messenger (1973) demonstrated and Guy, Chou, Lin, and Christensen (1975) confirmed that a microwave pulse with a slow rise time is ineffective in producing an auditory response; only if the rise time is short, resulting in effect in a square wave with respecting to the leading edge of the envelope of radiated radio-frequency energy, does the auditory response occur. Thus, the rate of change (the first drivative) of the wave form of the pulse is a critical factor in perception. Given a thermodynamic interpretation, it would follow that information can be encoded in the energy and “communicated” to the “listener.” Communication has in fact been demonstrated.

by Guy. Sharp and Grove (Note 2) found that appropriate modulation of microwave energy can result in direct “wireless” and “receiverless” communication of speech. They recorded by voice on tape each of the single-syllable words for digits between 1 and 10. The electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed zero reference in the negative direction, a brief pulse of microwave energy was trig-

Joseph Sharp found that:

“...appropriate modulation of microwave energy can

result in direct “wireless” and “receiverless” communication of speech. They recorded by voice on tape each of the single-syllable words for digits between 1 and 10.

...By radiating themselves with these “voice-modulated” microwaves, Sharp and Grove were readily able to hear, identify, and distinguish among the 9 words.

gered. By radiating themselves with these “voice-modulated” microwaves, Sharp and Grove were readily able to hear, identify, and distinguish among the 9 words. The sounds heard were not unlike those emitted by persons with artificial larynxes. Communication of more complex words and of sentences was not attempted because the averaged densities of energy required to transmit longer messages would approach the current 10 mW/cm² limit of safe exposure. The capability of communicating directly with a human being by “receiverless radio” has obvious potentialities both within and without the clinic. But the hotly debated and unresolved question of how much microwave radiation a human being can safely be exposed to will probably forestall applications within the near future.

Dr. Joseph C. Sharp, began his career in 1961 as a research psychologist at the Walter Reed Army Institute of Research where, in 1970, he was appointed Deputy Director of Neuropsychiatry. He has also served as Chief of the Department of Experimental Psychology and Behavioral Radiology at Walter Reed.

Just after his successful (and unclassified) demonstration of voice-to-skull technology in 1973, he was given a job at NASA's Ames Research Center, Moffett Field, California where his project was now “classified”.

He worked at Ames from 1974 through 1993, the last five years of which he was director of space research:

“ As director of space research at the NASA facility, Sharp is responsible for the management of all space activity at the Ames Research Center

space activity at the Ames Research Center, including the physical and life sciences, engineering and flight projects, grants to university scientists and contracts to aerospace industry.

46. In 1975, Dr. Allan Frey published a study in the Annals of the New York Academy of Sciences stating that microwaves “with certain modulations” could cause leakage in the blood–brain barrier, with possibly lethal consequences. In one experiment, he synchronized microwaves with the myocardial rhythm of a frog heart, and found that **the heart stopped beating**. In another experiment, he microwaved cats and found that **it had a huge effect on emotions**.

Breaching the blood-brain barrier means that bacteria, viruses and toxins from the blood can enter the brain. Frey’s method of demonstrating this effect of microwaves was simple. He injected a fluorescent dye into the circulatory system of white rats, then swept the microwave frequencies across their bodies. In a matter of minutes, the dye had leached into the confines of the rats’ brains.

Dr. Frey was **falsely discredited** by the United States government – **meanwhile his work was taken into “black” status**.

Dr. Frey [writes in The Scientist](#), 2012-

...when a scientist did publish findings that might indicate a risk, Brooks selected contractors to do experiments that suggested the scientist’s research was invalid or not relevant to the safety of Air Force radar.

“ For example, after my colleagues and I [published](#) in 1975 that exposure to very weak microwave radiation opens the regulatory interface known as the blood brain barrier (bbb), a critical protection for the brain, the Brooks AFB group selected a contractor to supposedly replicate our experiment.

For 2 years, this contractor presented data at scientific conferences stating that microwave radiation had no effect on the bbb. After much pressure from the scientific community, he finally revealed that he had not, in fact, replicated our work. We had injected dye into the femoral vein of lab rats after exposure to microwaves and observed the dye in the brain within 5 minutes. The Brooks contractor had stuck a needle into the animals' bellies and sprayed the dye onto their intestines. Thus it is no surprise that when he looked at the brain 5 minutes later, he did not see any dye; the dye had yet to make it into the circulatory system.

Another Brooks AFB responsibility that further incentivized the spreading of misinformation was to lead a lab on a classified microwave-bio weapons program. Competition between this effort and the microwave-bio research programs undoubtedly going on in other nations at the time would explain the Brooks group's attempts to block and discredit unclassified research in the microwave area and the subsequent publication of the results: it did not want advances in knowledge to appear in the scientific literature where the USSR could benefit from it.

In addition to actively suppressing results of microwave-bio research, the Brooks group also attempted to block funding for such research in the first place—and largely succeeded. For example, after we and others published the first papers in the mid- to late-'70s showing that very low intensity microwaves could open the bbb, the Department of Defense (DOD) issued a report, written by a psychologist at a Kansas Veterans Administration hospital who was neither trained nor experienced in research on the bbb, that concluded "...if a real potential for catastrophic effects exists, it would be

evident from the research already reported in the literature.” (An original draft of the report also noted that “DOD funding of research evaluating the effects of microwaves on the bbb should be of low priority,” though this statement was removed before the report was released to the public.)

Largely as a consequence of this report, funding for open microwave-bio research in the United States was essentially shut down. Several months after the report was released, I requested renewal of government funding, which in part supported research on the bbb. I received a letter stating that funding would not be granted unless I dropped the bbb part of the proposal. And in a September 1981 article in [Microwave News](#), 2 years later, the editor wrote, “Surprisingly, no new [bbb] work was reported this year.”

***bbb=blood brain barrier**

The above is important because it shows what one of the tactics is to try and hide or suppress information as to what is really going on in bio-weapons research. They hire scientists to “replicate” the experiment (that don’t) and then pronounce it unworkable. Meanwhile, back at the ranch, they are secretly using it for their own nefarious purposes.

By the way, Dr Frey is still trying to get his voice heard by the American government concerning microwaves. As recently as February 2013, he submitted an [official comment to the FCC](#) on this matter. A nice listing of articles by Frey is available [here](#).

Apparatus and method for remotely monitoring and altering brain waves

Abstract

Apparatus for and method of sensing brain waves at a position remote from a subject whereby electromagnetic signals of different frequencies are simultaneously transmitted to the brain of the subject in which the signals interfere with one another to yield a waveform which is modulated by the subject's brain waves. The interference waveform which is representative of the brain wave activity is re-transmitted by the brain to a receiver where it is demodulated and amplified. The demodulated waveform is then displayed for visual viewing and routed to a computer for further processing and analysis. The demodulated waveform also can be used to produce a compensating signal which is transmitted back to the brain to effect a desired change in electrical activity therein.

Claims

What is claimed is:

- Brain wave monitoring apparatus comprising
means for producing a base frequency signal,
means for producing a first signal having a frequency related to that of the base frequency and at a predetermined phase related thereto,
means for transmitting both said base frequency and said first signals to the brain of the subject being monitored,
means for receiving a second signal transmitted by the brain of the subject being monitored in response to both said base frequency and said first signals,
mixing means for producing from said base frequency signal and said received second signal a response signal having a frequency related to that of the base frequency, and
means for interpreting said response signal.
- Apparatus as in claim 1 where said receiving means comprises
means for isolating the transmitted signals from the received second signals.
- Apparatus as in claim 2 further comprising a band pass filter with an input connected to said isolating means and an output connected to said mixing means.
- Apparatus as in claim 1 further comprising means for amplifying said response signal.
- Apparatus as in claim 4 further comprising means for demodulating said amplified response signal.
- Apparatus as in claim 5 further comprising interpreting means connected to the output of said demodulator means.
- Apparatus according to claim 1 further comprising
means for producing an electromagnetic wave control signal dependent on said response signal, and
means for transmitting said control signal to the brain of said subject.
- Apparatus as in claim 7 wherein said transmitting means comprises means for directing the electromagnetic wave control signal to a predetermined part of the brain.
- A process for monitoring brain wave activity of a subject comprising the steps of
transmitting at least two electromagnetic energy signals of different frequencies to the brain of the subject being monitored,
receiving an electromagnetic energy signal resulting from the mixing of said two signals in the brain modulated by the brain wave activity and retransmitted by the brain in response to said transmitted energy signals, and,
interpreting said received signal.
- A process as in claim 9 further comprising the step of transmitting a further electromagnetic wave signal to the brain to vary the brain wave activity.
- A process as in claim 10 wherein the step of transmitting the further signals comprises
obtaining a standard signal,
comparing said received electromagnetic energy signals with said standard signal,
producing a compensating signal corresponding to the comparison between said received electrognaptic energy signals and the standard signal, and
transmitting the compensating signals to the brain of the subject being monitored.

Description

BACKGROUND OF THE INVENTION

Medical science has found brain waves to be a useful barometer of organic functions. Measurements of electrical activity in the brain have been instrumental in detecting physical and psychic disorder, measuring stress, determining sleep patterns, and monitoring body metabolism.

The present art for measurement of brain waves employs electroencephalographs including probes with sensors which are attached to the skull of the subject under study at points proximate to the regions of

the brain and monitored. Electrical contact between the sensors and apparatus employed to process information detected from waves is maintained by a plurality of wires extending from the sensors to the apparatus. The necessity for physically attaching the measuring apparatus to the subject imposes several limitations on the measurement process. The subject may experience discomfort, particularly if the measurements are to be made over extended periods of time. His bodily movements are restricted and he is generally confined to the immediate vicinity of the measuring apparatus. Furthermore, measurements cannot be made while the subject is conscious without his awareness. The comprehensiveness of the measurements is also limited since the finite number of probes employed to monitor local regions of brain wave activity do not permit observation of the total brain wave profile in a single test.

SUMMARY OF THE INVENTION

The present invention relates to apparatus and a method for monitoring brain waves wherein all components of the apparatus employed are remote from the test subject. More specifically, high frequency transmitters are operated to radiate electromagnetic energy of different frequencies through antennas which are capable of scanning the entire brain of the test subject or any desired region thereof. The signals of different frequencies penetrate the skull of the subject and impinge upon the brain where they mix to yield an interference wave modulated by radiations from the brain's natural electrical activity. The modulated interference wave is re-transmitted by the brain and received by an antenna at a remote station where it is demodulated, and processed to provide a profile of the subject's brain waves. In addition to passively monitoring his brain waves, the subject's neurological processes may be affected by transmitting to his brain, through a transmitter, compensating signals. The latter signals can be derived from the received and processed brain waves.

OBJECTS OF THE INVENTION

It is therefore an object of the invention to remotely monitor electrical activity in the entire brain or selected local regions thereof with a single measurement.

Another object is the monitoring of a subject's brain wave activity through transmission and reception of electromagnetic waves.

Still another object is to monitor brain wave activity from a position remote from the subject.

A further object is to provide a method and apparatus for affecting brain wave activity by transmitting electromagnetic signals thereto.

DESCRIPTION OF THE DRAWINGS

Other and further objects of the invention will appear from the following description and the accompanying drawings, which form part of the instant specification and which are to be read in conjunction therewith, and in which like reference numerals are used to indicate like parts in the various views;

FIG. 1 is a block diagram showing the interconnection of the components of the apparatus of the invention;

FIG. 2 is a block diagram showing signal flow in one embodiment of the apparatus.

DESCRIPTION OF THE PREFERRED EMBODIMENT

Referring to the drawings, specifically FIG. 1, a high frequency transmitter 2 produces and supplies two electromagnetic wave signals through suitable coupling means 14 to an antenna 4. The signals are directed by the antenna 4 to the skull 6 of the subject 8 being examined. The two signals from the antenna 4, which travel independently, penetrate the skull 6 and impinge upon the tissue of the brain 10.

Within the tissue of the brain 10, the signals combine, much in the manner of a conventional mixing process technique, with each section of the brain having a different modulating action. The resulting waveform of the two signals has its greatest amplitude when the two signals are in phase and thus reinforcing one another. When the signals are exactly 180 degree out of phase the combination produces a resultant waveform of minimum amplitude. If the amplitudes of the two signals transmitted to the subject are maintained at identical levels, the resultant interference waveform, absent influences of external radiation, may be expected to assume zero intensity when maximum interference occurs, the number of such points being equal to the difference in frequencies of the incident signals. However, interference by radiation from electrical activity within the brain 10 causes the waveform resulting from interference of the two transmitted signals to vary from the expected result, i.e., the interference waveform is modulated by the brain waves. It is believed that this is due to the fact that brain waves produce electric charges each of which has a component of electromagnetic radiation associated with it. The electromagnetic radiation produced by the brain waves in turn reacts with the signals transmitted to the brain from the external source.

The modulated interference waveform is re-transmitted from the brain 10, back through the skull 6. A quantity of energy is re-transmitted sufficient to enable it to be picked up by the antenna 4. This can be controlled, within limits, by adjusting the absolute and relative intensities of the signals, originally transmitted to the brain. Of course, the level of the transmitted energy should be kept below that which may be harmful to the subject.

The antenna passes the received signal to a receiver 12 through the antenna electronics 14. Within the receiver the wave is amplified by conventional RF amplifiers 16 and demodulated by conventional detector and modulator electronics 18. The demodulated wave, representing the intra-brain electrical activity, is amplified by amplifiers 20 and the resulting information in electronic form is stored in buffer circuitry 22. From the buffers 22 the information is fed to a suitable visual display 24, for example one employing a cathode ray tube, light emitting diodes, liquid crystals, or a mechanical plotter. The information may also be channeled to a computer 26 for further processing and analysis with the output of the computer displayed by heretofore mentioned suitable means.

In addition to channeling its information to display devices 24, the computer 26 can also produce signals to control an auxiliary transmitter 28. Transmitter 28 is used to produce a compensating signal which is transmitted to the brain 10 of the subject 8 by the antenna 4. In a preferred embodiment of the invention, the compensating signal is derived as a function of the received brain wave signals, although it can be produced separately. The compensating signals affect electrical activity within the brain 10.

Various configurations of suitable apparatus and electronic circuitry may be utilized to form the system generally shown in FIG. 1 and one of the many possible configurations is illustrated in FIG. 2. In the example shown therein, two signals, one of 100 MHz and the other of 210 MHz are transmitted simultaneously and combine in the brain 10 to form a resultant wave of frequency equal to the difference in frequencies of the incident signals, i.e., 110 MHz. The sum of the two incident frequencies is also available, but is discarded in subsequent filtering. The 100 MHz signal is obtained at the output 37 of an RF power divider 34 into which a 100 MHz signal generated by an oscillator 30 is injected. The oscillator 30 is of a conventional type employing either crystals for fixed frequency circuits or a tunable circuit set to oscillate at 100 MHz. It can be a pulse generator, square wave generator or sinusoidal wave generator. The RF power divider can be any conventional VHF, UHF or SHF frequency range device constructed to provide, at each of three outputs, a signal identical in frequency to that applied to its input.

The 210 MHz signal is derived from the same 100 MHz oscillator 30 and RF power divider 34 as the 100 MHz signal, operating in concert with a frequency doubler 36 and 10 MHz oscillator 32. The frequency doubler can be any conventional device which provides at its output a signal with frequency equal to twice the frequency of a signal applied at its input. The 10 MHz oscillator can also be of conventional type similar to the 100 MHz oscillator heretofore described. A 100 MHz signal from the output 39 of the RF power divider 34 is fed through the frequency doubler 36 and the resulting 200 MHz signal is applied to a mixer 40. The mixer 40 can be any conventional VHF, UHF or SHF frequency range device capable of accepting two input signals of differing frequencies and providing two output signals with frequencies equal to the sum and difference in frequencies respectively of the input signals. A 10 MHz signal from the oscillator 32 is also applied to the mixer 40. The 200 MHz signal from the doubler 36 and the 10 MHz signal from the oscillator 32 combine in the mixer 40 to form a signal with a frequency of 210 MHz equal to the sum of the frequencies of the 200 MHz and 10 MHz signals.

The 210 MHz signal is one of the signals transmitted to the brain 10 of the subject being monitored. In the arrangement shown in FIG. 2, an antenna 41 is used to transmit the 210 MHz signal and another antenna 43 is used to transmit the 100 MHz signal. Of course, a single antenna capable of operating at 100 MHz and 210 MHz frequencies may be used to transmit both signals. The scan angle, direction and rate may be controlled mechanically, e.g., by a reversing motor, or electronically, e.g., by energizing elements in the antenna in proper synchronization. Thus, the antenna(s) can be of either fixed or rotary conventional types.

A second 100 MHz signal derived from output terminal 37 of the three-way power divider 34 is applied to a circulator 38 and emerges therefrom with a desired phase shift. The circulator 38 can be of any conventional type wherein a signal applied to an input port emerges from an output port with an appropriate phase shift. The 100 MHz signal is then transmitted to the brain 10 of the subject being monitored via the antenna 43 as the second component of the dual signal transmission. The antenna 43 can be of conventional type similar to antenna 41 heretofore described. As previously noted, these two antennas may be combined in a single unit.

The transmitted 100 and 210 MHz signal components mix within the tissue in the brain 10 and interfere with one another yielding a signal of a frequency of 110 MHz, the difference in frequencies of the two incident components, modulated by electromagnetic emissions from the brain, i.e., the brain wave activity being monitored. This modulated 110 MHz signal is radiated into space.

The 110 MHz signal, modulated by brain wave activity, is picked up by an antenna 45 and channeled back through the circulator 38 where it undergoes an appropriate phase shift. The circulator 38 isolates the transmitted signals from the received signal. Any suitable duplexor or duplexer can be used. The antenna 45 can be of conventional type similar to antennas 41 and 43. It can be combined with them in a single unit or it can be separate. The received modulated 110 MHz signal is then applied to a band pass filter 42, to eliminate undesirable harmonics and extraneous noise, and the filtered 110 MHz signal is inserted into a mixer 44 into which has also been introduced a component of the 100 MHz signal from the source 30 distributed by the RF power divider 34. The filter 42 can be any conventional band pass filter. The mixer 44 may also be of conventional type similar to the mixer 40 heretofore described.

The 100 MHz and 110 MHz signals combine in the mixer 44 to yield a signal of frequency equal to the difference in frequencies of the two component signals, i.e., 10 MHz still modulated by the monitored brain wave activity. The 10 MHz signal is amplified in an IF amplifier 46 and channeled to a demodulator 48. The IF amplifier and demodulator 48 can both be of conventional types. The type of demodulator selected will depend on the characteristics of the signals transmitted to and received from the brain, and the information desired to be obtained. The brain may modulate the amplitude, frequency and/or phase of the interference waveform. Certain of these parameters will be more sensitive to corresponding brain wave characteristics than others. Selection of amplitude, frequency or phase demodulation means is governed by the choice of brain wave characteristic to be monitored. If desired, several different types of demodulators can be provided and used alternately or at the same time.

The demodulated signal which is representative of the monitored brain wave activity is passed through audio amplifiers 50 a, b, c which may be of conventional type where it is amplified and routed to displays 58 a, b, c and a computer 60. The displays 58 a, b, c present the raw brain wave signals from the amplifiers 50 a, b, c. The computer 60 processes the amplified brain wave signals to derive information suitable for viewing, e.g., by suppressing, compressing, or expanding elements thereof, or combining them with other information-bearing signals and presents that information on a display 62. The displays can be conventional ones such as the types heretofore mentioned employing electronic visual displays or mechanical plotters 58b. The computer can also be of conventional type, either analog or digital, or a hybrid.

A profile of the entire brain wave emission pattern may be monitored or select areas of the brain may be observed in a single measurement simply by altering the scan angle and direction of the antennas. There is no physical contact between the subject and the monitoring apparatus. The computer 60 also can determine a compensating waveform for transmission to the brain 10 to alter the natural brain waves in a desired fashion. The closed loop compensating system permits instantaneous and continuous modification of the brain wave response pattern.

In performing the brain wave pattern modification function, the computer 60 can be furnished with an external standard signal from a source 70 representative of brain wave activity associated with a desired neurological response. The region of the brain responsible for the response is monitored and the received signal, indicative of the brain wave activity therein, is compared with the standard signal. The computer 60 is programmed to determine a compensating signal, responsive to the difference between the standard signal and received signal. The compensating signal, when transmitted to the monitored region of the brain, modulates the natural brain wave activity therein toward a reproduction of the standard signal, thereby changing the neurological response of the subject.

The computer 60 controls an auxiliary transmitter 64 which transmits the compensating signal to the brain 10 of the subject via an antenna 66. The transmitter 64 is of the high frequency type commonly used in radar applications. The antenna 66 can be similar to antennas 41, 43 and 45 and can be combined with them. Through these means, brain wave activity may be altered and deviations from a desired norm may be compensated. Brain waves may be monitored and control signals transmitted to the brain from a remote station.

It is to be noted that the configuration described is one of many possibilities which may be formulated without departing from the spirit of my invention. The transmitters can be monostatic or bistatic. They also can be single, dual, or multiple frequency devices. The transmitted signal can be continuous wave, pulse, FM, or any combination of these as well as other transmission forms. Typical operating frequencies for the transmitters range from 1 MHz to 40 GHz but may be altered to suit the particular function being monitored and the characteristics of the specific subject.

The individual components of the system for monitoring and controlling brain wave activity may be of conventional type commonly employed in radar systems.

Various subassemblies of the brain wave monitoring and control apparatus may be added, substituted or combined. Thus, separate antennas or a single multi-mode antenna may be used for transmission and reception. Additional displays and computers may be added to present and analyze select components of the monitored brain waves.

Modulation of the interference signal retransmitted by the brain may be of amplitude, frequency and/or phase. Appropriate demodulators may be used to decipher the subject's brain activity and select components of his brain waves may be analyzed by computer to determine his mental state and monitor his thought processes.

As will be appreciated by those familiar with the art, apparatus and method of the subject invention has numerous uses. Persons in critical positions such as drivers and pilots can be continuously monitored with provision for activation of an emergency device in the event of human failure. Seizures, sleepiness and dreaming can be detected. Bodily functions such as pulse rate, heartbeat regularity and others also can be monitored and occurrences of hallucinations can be detected. The system also permits medical diagnoses of patients, inaccessible to physicians, from remote stations.

Agency: AF Field

Contract Number: F41624-93-C-9013

Award Start Date: 17 May 93

Award Completion Date: 17 December 93

Proposal Title: **Communicating Via the Microwave Auditory
Effect**

Principal Investigator Name: Brian Kohn

Firm: Science & Engineering Association Albuquerque, New Mexico

Microwave Hearing RF Hearing

Abstract:

In this research program, we plan to investigate a revolutionary new form of communication based on the microwave auditory effect. The study found that voice communications, via the microwave auditory effect, are highly feasible.
